ABSTRACTS:—

Marriages registered in Ireland in each of the Provinces, Counties, and Superintendent Registrars' Districts, in 1892, distinguishing Roman Catholic from Protestant Marriages, and giving the Total Number registered in each Quarter of the Year; the Conjugal Condition of Persons Married; the Number of Minors and of those who signed the Registers by Marks, ... 46–59

Ages of 9,004 Persons married in 1892, distinguishing those of Bachelors, Spinsters, Widowers, and Widows, ... 60, 61

Marriages, Births, and Deaths registered in each of the Counties, 1892, . . . 62

Marriages, Births, and Deaths in the Superintendent Registrars' Districts, and portions of Superintendent Registrars' Districts in each County, distinguishing the Sexes and Illegitimate Births, ... 63–68

Marriages, Births, and Deaths in each of the Superintendent Registrars' Districts in Ireland, 69–71

Births and Deaths in the Registrars' Districts and portions of Registrars' Districts in each County, distinguishing Sexes and Illegitimate Births, ... 72–95

Births and Deaths in each of those Registrars' Districts which extend into more than one County, distinguishing the Sexes and Illegitimate Births, ... 96

Births (distinguishing Males and Females) registered in the Provinces, Counties, and Superintendent Registrars' Districts (or portions of such Districts), in each of the Four Quarters of 1892, ... 98–111

Births (distinguishing Males and Females), registered in each Superintendent Registrar's District in Ireland during each Quarter of the year 1892, ... 112–114

Deaths (distinguishing Males and Females) registered in each of the Four Quarters of 1892, in Provinces, Counties, and Superintendent Registrars' Districts (or portions of such Districts), ... 115–127

Deaths (distinguishing Males and Females) registered in each Superintendent Registrar's District in Ireland during each Quarter of the year 1892, ... 126–129

Deaths of Males and Females at different Ages registered in 1892, in Provinces and Counties, and in the Superintendent Registrars' Districts, or portions of such Districts in each County, ... 130–145

Deaths of Males and Females at different Ages in each Superintendent Registrar's District in Ireland, ... 146–151

Causes of Death of Males and Females in Ireland, at different periods of life in 1892, . 152–166

Causes of Death of Males and Females in Ireland, and in each of the Provinces, in 1892, . 167–171

Deaths from several Zymotic and other Causes in 1892, in the Provinces and Counties, showing the circumstances as to residence at time of death, ... 172–173

Deaths from several Zymotic and other causes in 1892, in each Superintendent Registrar's District in Ireland, showing the circumstances as to residence at time of death, . . 174–181

Deaths from several Zymotic and other Causes in 1892, in those Registrars' Districts in which the principal Urban Sanitary Districts in Ireland are situate, showing the circumstances as to residence at time of death, ... 182–183

Abstract of Meteorological Observations, 1892, ... 184

Summary Tables of Meteorological Observations, 1872–92, ... 185–186

Estimated Population of Ireland in each of the years 1801–92, ... 187

Population by Sexes and Ages according to Census Returns of 1861, 1871, 1881, and 1891, . 187

Index to Superintendent Registrars' Districts, and Registrars' Districts, ... 188–191

Legal Work of the General Register Office for the Financial Year, 1892–3, ... 192

REPORT

TO

HIS EXCELLENCY ROBERT OFFLEY ASHBURTON, BARON HOUGHTON, &c., &c., &c.

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

MAY IT PLEASE YOUR EXCELLENCY,—

I have the honour to submit, for your Excellency's consideration, the Twenty-ninth Annual Report on Marriages, Births, and Deaths in Ireland. This Report would have been submitted to your Excellency at a much earlier date but that its preparation was retarded by the necessity of complying with the desire of the Chairman and Members of a Select Committee of the House of Commons, that details should be extracted regarding those deaths (very numerous in Ireland) in which, according to the Registration records, the causes were not certified owing to there not having been any Medical Attendant during the last illness—a work which was best accomplished simultaneously with the general tabulation of Deaths by Causes and Ages.

GENERAL SUMMARY.

The Marriages registered in Ireland during the year 1892 number 21,530; the Births 104,234; and the Deaths 90,044. The marriage rate was slightly above the average for the preceding ten years, the birth rate showed a small decline and the death rate was not only above the average, but was, also, the highest rate for any year except two (1879 and 1880), since registration was established in 1864.

The recorded natural increase of population, or excess of births over deaths, was 14,190: the loss by emigration amounted to 50,867; there would thus appear to have been a decrease of 36,677 in the population during the year, but against a portion of this decrease there is a set-off in immigration, of which no official record has been obtained. The estimated population in the middle of the year was 4,638,169.

TABLE I.—Showing for each of the years 1882–92, the estimated **Population**; the number of **Marriages, Births,** and **Deaths** registered, and the number of **Emigrants** enumerated, with the rates per 1,000 of the estimated Population represented thereby; and the averages for the ten years 1882–91.

YEARS.	*Estimated Population in the middle of each year.	Numbers *Registered*.			Number of Emigrants as returned by the Enumerators.	Rate per 1,000 of Estimated Population.			
		Marriages.	Births.	Deaths.		Marriages.	Births.	Deaths.	Emigrants.

There are 2,614 Local Registration Officers holding office directly under the Department or who have entered into bonds with the Registrar-General for the due discharge of their duties. During the year 1892, 547 cases of vacancies or appointments were dealt with.

* See page 187.

I append a table showing the number of Searches, &c., since the commencement of the Acts for the Registration of Births and Deaths and of Roman Catholic Marriages in 1864. It will be observed that the steady increase in the number of searches and in the number of certified copies issued was maintained in 1892.

TABLE II.—NUMBER of SEARCHES made; number of CERTIFICATES issued, and Amount received as FEES for SEARCHES, &c., at the GENERAL REGISTER OFFICE, DUBLIN, during the 29 years 1864–92.

In my Annual Report for the year 1890 I referred to a Book printed for the use of the Department on the "Varieties and Synonymes of Surnames and Christian Names in Ireland," which was prepared by Mr. Matheson. This Book has proved to be of great practical value, and also of much interest from a literary and philological point of view. An Appendix to the present Report is in type, and will shortly be ready, which deals with another phase of the same subject, entitled "Special Report on Surnames in Ireland, with Notes as to their Numerical Strength, Derivation, Ethnology, and Distribution, based on information extracted from the Indexes of the General Register Office." This Appendix will supply a want long felt in Ireland, and one which the Government desired to meet in the year 1881. At that time, as will be explained in the Appendix, it was found impossible to undertake a work of this character. Shortly after the closing of the Census Office of 1881 a series of investigations were undertaken by Mr. Matheson with the view of drawing up a plan by which the wishes of the Government in 1881 could be carried out. The result is the valuable and interesting Appendix referred to, which, while reviewing the subject of nomenclature in Ireland on similar lines to those adopted by the English and Scotch Departments, also includes a much larger amount of information and detail. I desire here to acknowledge the industry and ability of Mr. Matheson in planning and carrying out this work. I have also to thank others for their advice and assistance, and I may mention that the late Right Reverend Doctor Reeves, Bishop of Down, the learned President of the Royal Irish Academy, took a great interest in the work, and was in frequent communication with Mr. Matheson and myself regarding it.

During the financial year ended 31st March last 418 cases were reported of offences against the Acts administered by this Department. On careful inquiry into the circumstances, in 127 cases prosecutions were ordered to be instituted against the offenders. In 69 of these the parties were convicted and punished; in 52 the proceedings were abandoned, the parties (in most instances) paying the costs of court and complying with the law; and in 6 cases the summonses were dismissed.

The cases dealt with included the following offences:—Neglect to register Births, neglect to register Deaths, neglect to furnish Certificate of Marriage, failure of Coroner to furnish Certificate of Inquest; giving false information as to age at death, as to cause of death, and as to duration of illness previous to death; giving false information as to Births, viz.—registering illegitimate children as legitimate, and misrepresenting date of birth; carelessly allowing injury to Register Books.

The administration of the legal work of the office is, as mentioned in my Reports for 1889, 1890, and 1891, entrusted to Mr. Matheson, whose detailed statement of the business transacted will be found at page 192.

MARRIAGES.

I regret to state that in 21 cases returns relating to a portion of the year 1892 have not yet been furnished by the clergy of the Church of Ireland, and in 4 instances by the Presbyterian clergy connected with the General Assembly. The number of marriages celebrated in the majority of these churches is known to have been small, and would not appreciably affect the general statistical results for Ireland, but nevertheless it is unsatisfactory to have to notice even any omissions to comply with Sec. 65 of 7 & 8 Vic., cap. 81, under which these returns are required from the clergy.

The number of Marriages registered during the year is 21,530, being equal to 1 in every 215, or 4·64 per 1,000, of the estimated population,* a rate which is ·05 over that for the previous year, and ·27 above the average for the ten years 1882–91.

Of the 21,530 Marriages registered during the year 1892, 14,757 were between Roman Catholics, 3,553 were celebrated according to the rites and ceremonies of the Church of Ireland; 2,352 were in Presbyterian Meeting-houses; 481 in "Registered Buildings" belonging to various religious denominations; only 372 by civil contract in the Registrars' offices; 9 were according to the usages of the Society of Friends; and 6 according to the Jewish rites.

The Roman Catholic Marriages are equal to a rate of 4·22 per 1,000 of the estimated number of Roman Catholics, and the other Marriages represent a rate of 5·94 per 1,000 of all persons other than Roman Catholics in the population.

Of the 3,553 Marriages according to the rites of the Church of Ireland, 47 were by special licence, 2,999 by licence, 442 after the publication of banns, 6 on Registrar's certificate, and in 59 instances there was no information afforded as to which of these methods was adopted.

* Throughout this Report the rates for the total of Ireland are based on the estimated population in the middle of the respective years.

TABLE IV.—**Marriages** registered in Ireland in 1892 and each of the previous ten years, according to the **modes of celebration**; with the **rate** per 1,000 of the population represented:—

1892, . .	3,553	2,352	481	372	9	6	6,773	14,757	21,530	5·94	4·22	4·64

During the year 1892 there were issued by the Registrars 718 Licences for Marriage in Registered Buildings and in the Registrars' offices.

The number of Marriage Licences issued by the licensing Ministers of the several Presbyterian bodies is given in the following summary:—

Presbytery or Synod.	Number of Licensing Ministers on 31st December, 1892.	Number of Registered Meeting-houses on 31st December, 1892.	Number of Licences issued.
1. General Assembly of the Presbyterian Church in Ireland, ...	144	569	2,274
2. Remonstrant Synod of Ulster, ...	8	19	45
3. Presbytery of Antrim, ...	5	8	8
4. United Presbytery or Synod of Munster, ...	2	2	–
5. Northern Presbytery of Antrim, ...	2	5	11
Total, ...	161	603	2,338

There being no civil restrictions as to the time or place for celebrating marriages between Roman Catholics in Ireland, a registration of the churches and chapels of the Roman Catholic Church is not necessary for the purposes of this office; but with reference to other religious bodies, a record is kept of the places of Divine worship in which marriages may lawfully be solemnized without special licence, and from this it appears that, on the 31st December, 1892, there were 1,490 churches and chapels of the Church of Ireland, 603 registered Presbyterian Meeting-houses, and 368 "Registered Buildings" belonging to various religious denominations. Compared with the previous year, these numbers show a decrease of 2 as regards the Church of Ireland, an increase of 2 in the number of Presbyterian Meeting-houses, and an increase of 9 "Registered Buildings."

The following statement shows the several religious bodies having "Registered Buildings" in 1892:—

Denominations.	No. of Places of Worship.	Denominations.	No. of Places of Worship.	Denominations.	No. of Places of Worship.
Methodists, . . .	217	Methodists, New Connexion,	7	Covenanters, ...	1

As more than a moiety of the annual number of Roman Catholic marriages in the provinces of Munster and Connaught are celebrated between Christmas and Shrovetide, the marriages registered in Ireland during the first quarter of the year always largely outnumber those in any of the other quarters. In 1892, the numbers recorded were—in the first quarter 7,247; in the second, 4,741; in the third, 4,776; and in the last, 4,766.

The marriages of bachelors and spinsters constitute 86·7 per cent. of the total; those of widowers and spinsters 8·4 per cent.; of bachelors and widows 2·8 per cent.; and of widowers and widows 2·1 per cent. Thus, 10·5 per cent. of the men married were widowers, and 4·9 per cent. of the women were widows; and in 13 instances in every 100 marriages one or both of the contracting parties had been in the married state before.

TABLE V.—Showing by QUARTERLY PERIODS, the number of MARRIAGES registered in Ireland in each of the eleven years 1882–92, and the average number for the ten years 1882–91, distinguishing the number of Roman Catholic marriages registered under the 26 & 27 Vic., cap. 90, and of Protestant and other marriages under the 7 & 8 Vic., cap. 81:—

Year.	Marriages.

A complete registry of the exact ages of the persons married would be valuable from many points of view: hence it is matter for regret that in the great majority of instances the ages are not recorded. The requirements of the law are technically complied with by the entry in the age column of "minor" or of "full age," as the case may be, and there seems to be a general and increasing inclination to take advantage of this circumstance, as in 1892 the ages of both parties were specified in 4,502 cases only, being little more than one-fifth of the total number of marriages. In the year 1865, when 30,802 marriages were registered, the ages of both parties were given in 13,910 instances.

Of 21,530 men married during the year, 391, or 1·82 per cent., were minors; and of the women married, 1,714, or 7·96 per cent., were under age. These proportions are considerably below the averages for the preceding ten years.

The highest proportion of husbands (2·42 per cent.) married under age in 1892, was in the province of Ulster, and in that province there was also the highest per-centage of wives (9·15), not of full age.

It may be added that the per-centage of persons married in Ireland who were under age is very far below the corresponding rates in England and Scotland.

The signatures of the contracting parties in the marriage registers or certificates afford a rough test of the progress of elementary education. In the year 1892, 17,516, or 81·4 per cent., of the husbands, and 17,611, or 81·8 per cent., of the wives, wrote their names, and the remainder signed by marks.

These figures, though still leaving much to be desired, contrast hopefully with the corresponding results eleven years since, the per-centage of persons married in 1882 who wrote their names being—men 74·4, and women 70·3.

The per-centages for the several provinces last year range, for men, from 74 in Connaught to 84 in Leinster, and, for women, from 78 in Connaught to 86 in Leinster.

In 2,021 cases, both of the parties married signed the register by "mark," and in 3,891 the register was thus signed by either the husband or the wife, so that in 5,912 cases, or 27·5 per cent. of the total number of marriages, one or both of the parties signed by mark; and in 15,618, or 72·5 per cent., *both* parties wrote their names.

The number of marriages registered in each of the eleven years 1882–92; the proportion per cent. of persons married who wrote their names in the registers; of minors, of widowers, and of widows are given in the following Table for Ireland, and for each of the four provinces.

TABLE VI.—Showing as regards the **Marriages** in Ireland and in each of the Four Provinces during the years 1882–92, the proportion per cent. of Persons who **signed their Names**, of Persons **not of Full Age**, and of **Re-marriages.** The figures for the years 1882–84 refer to Registration Provinces; those for 1885–92 to the Provinces Proper.

	1892,	74·1	77·5	1·05	8·82	9·20	4·43

In proportion to population at all ages, the registered marriages were most numerous in the province of Ulster, in which, however, the rate was only 5·2 per 1,000 of the population, according to the Census of 1891; Leinster comes next, with 5·0 per 1,000; Munster third, with 4·1 per 1,000; and Connaught last, the rate being 3·3 per 1,000.

The highest rate for any county was 7·6 per 1,000 of the population in 1891, which was the marriage rate for Antrim; and the lowest 3·2 per 1,000, for Galway, Mayo, and Sligo. Between these, the most favourable were 6·8 for Dublin, and 5·1 for Down; and the least so 3·4 for Carlow and Leitrim, and 3·5 for Clare.

BIRTHS.

The number of births registered during the year 1892 was 104,234—53,571 boys and 50,663 girls, or 105·7 of the former to every 100 of the latter—the rate afforded in proportion to the estimated population being 1 in 44·5, or 22·5 per thousand, which is 0·7 under the low average rate for the ten years, 1882–91.

Of the 104,234 children whose births were registered in Ireland during the year 1892, 101,621, or 97·5 per cent. were legitimate, and 2,613, or 2·5 per cent., were illegitimate: the average per-centage of illegitimate for the preceding 10 years was 2·7. It is unnecessary to say that these results compare very favourably with the returns for most other countries.

Of the children born in wedlock during the year, 52,203 were males, and 49,418 females, being 105·6 of the former to every 100 of the latter, and of the illegitimate children 1,368 were males, and 1,245 females, or 109·9 boys to 100 girls.

Comparing the provinces, we find that the per-centage of children born in Ulster, who were illegitimate, was 3·9; in Leinster, 2·2; in Munster, 2·0; and in Connaught, 0·5.

TABLE VII.—The Per-centage of Legitimate and of Illegitimate Births registered in Ireland during the years 1888–92, by Provinces.

Provinces.	Proportion per cent. of Legitimate Births.					Proportion per cent. of Illegitimate Births.

LEINSTER, . . .	97·5	97·5	97·5	97·6	97·8	2·5	2·5	2·5	2·4	2·2
MUNSTER, . . .	97·8	97·8	97·8	97·8	98·0	2·2	2·2	2·2	2·2	2·0
ULSTER, ...	95·6	95·6	96·0	96·0	96·1	4·4	4·4	4·0	4·0	3·9
CONNAUGHT, . . .	99·3	99·3	99·2	99·3	99·5	0·7	0·7	0·8	0·7	0·5

The respective total birth-rates for the provinces in 1892 were—Leinster, 22·2 per 1,000 of the population in 1891; Munster, 21·3; Ulster, 23·2; and Connaught, 21·1.

The four counties having the highest rates are Antrim, 28·2 per 1,000 of the population in 1891; Dublin, 26·7; Down, 25·1; and Kerry, 23·3. Those with the lowest rates are—Longford, 17·6; Monaghan, 17·9; Meath, 18·4; and Cavan, 18·8.

Of the total births, 52·9 per cent. were registered in the first six months of the year (182 days), and 47·1 per cent. in the second half of the year (184 days).

The number registered in the first quarter was 26,988 ; in the second, 28,161 ; in the third, 25,388 ; and in the fourth, 23,697.

DEATHS.

The deaths registered during the year amount to 90,044, being equal to 1 in 51·5 or 19·4 per 1,000 of the estimated population. The deaths of males number 44,009, and those of females 46,035, the former being equal to 19·2 in every 1,000 males living, and the latter representing 19·6 per 1,000 females.

The death-rate (19·4) is 1·4 over the average rate for the preceding ten years, and with the exception of those for the years 1879 and 1880, which are slightly higher, is the highest rate for any year since registration was established in the year 1864. Speaking generally, the increase is due to the exceptional prevalence of influenza in the earlier part of the year.

As usual, very many of the Registrars furnished at the close of each quarter valuable notes on the sanitary condition of their respective districts. These notes were embodied in the Quarterly Returns issued from this department, and emanating as they did, from gentlemen qualified to speak decisively on the subject, it is to be hoped that they received the serious attention of the various Local Authorities intrusted with the administration of the Public Health Acts.

With respect to the death-rates for the four provinces, the rate for Connaught is only 14·7 ; that for Munster is 18·1 ; for Ulster, 19·9, and for Leinster, 21·8 per 1,000 of the population in 1891.

Of the thirty-two counties, the four having the lowest registered mortality are—Galway, 14·1 per 1,000 ; Sligo, 14·2 ; Mayo, 14·5 ; and Kerry, 15·0.

Those in which the rate was highest are—Dublin, 27·7 ; Antrim, 23·1 ; Armagh, 21·6 ; and Down, 21·6.

The deaths registered in the first half of the year generally outnumber those in the second. In 1892, 59·8 per cent. of the total deaths were registered in the six months, January to June inclusive, and only 40·2 per cent. in the remaining six months of the year.

The annual rates represented by the deaths registered in each quarter are as follow:—First quarter, 26·4 per 1,000 of the population ; second, 20·0 ; third, 14·8 ; and fourth, 16·4.

From the Table on pp. 172–181 *it will be seen that, of the* 90,044 *deaths registered during the year,* 2,398 *took place in Infirmaries and General and Special Hospitals ;* 953 *in Public Lunatic Asylums;* 10,379 *in Workhouses and Workhouse Hospitals; and* 76,314 *were of persons who died "At their Own Homes, &c." As in former Reports a Table (see pages* 182–3) *is given showing like information for those Registrars' Districts in which the principal Urban Sanitary Districts in Ireland are situated.*

The deaths in "Infirmaries and General and Special Hospitals" constitute 2·7 per cent. of the total number, the per-centages for the four provinces varying from 0·3 in Connaught to 6·2 in Leinster. Nearly twelve per cent. of the deaths registered occurred in Workhouses or Workhouse Hospitals, the respective per-centages for the provinces being—Leinster, 13·6 ; Munster, 16·8 ; Ulster, 7·4 ; and Connaught, 8·6.

TABLE VIII.—Showing, by **Quarterly Periods**, the number of **Births** and **Deaths** registered in Ireland in each of the eleven years, 1882-92, and the average number for the ten years, 1882-91.

I.—SPECIFIC FEBRILE OR ZYMOTIC DISEASES.

The number of deaths from Specific Febrile or Zymotic diseases registered during the year 1892 was 9,973 (4,739 males and 5,234 females), or 215 in every 100,000 of the estimated population, being 3,558, or 55 per cent. over the comparatively low number for the preceding year, and much above the average for the ten years, 1882-91.

Of the 9,973 deaths from zymotic diseases 4,552, or 45·6 per cent., were amongst children under 10 years of age.

DEATH.

Small-pox.—There were not any deaths from small-pox registered during the year. In the year 1891 this disease caused 7 deaths, but in the two years preceding no fatal

* The rates are based on the population according to the Census; the rates for the years 1885–6 being founded on the 1881 population, and those for the years 1887–92 on the population by the Census of 1891.

cases of it were recorded. The average annual number for the ten years 1882–91, was 18 only; and of the total number (176) registered during that period 129 occurred during the first year, so that in late years deaths from Small-pox have been of very rare occurrence in Ireland.

Measles.—The number of deaths from Measles, which in 1891 fell as low as 240, amounted last year to 1,183, or 21·7 per cent. in excess of the average for the ten years, 1882–91. The deaths from this disease in the two Metropolitan Unions of Dublin North and Dublin South number 462, or 1·3 per 1,000 of the population at all ages, and those in Belfast Union 351, or 1·2 per 1,000 living; in Lurgan Union there were 54 fatal cases, and in Cork Union 61, so that the deaths in these five Unions amounted to 928, or 78 per cent. of the number for the whole country. The total number for the province of Leinster is 537, for Munster 96, for Ulster 504, and for Connaught 46.

Scarlet Fever.—Deaths from Scarlet Fever, although more numerous than in either of the two years preceding, were far below the average for the ten years 1882-91, the number being 419 as compared with an average of 927. Of the 419 deaths registered last year, 29 occurred in Leinster, 20 in Munster, 162 in Ulster, and 208 in Connaught, the last number including 55 in Castlereagh Union and 43 in Belmullet Union.

Diphtheria.—There were only 286 deaths from diphtheria registered, being 5 over the low number for the preceding year, but 56 under the average for the ten years 1882–91. The 286 deaths consist of 44 in Leinster, 33 in Munster, 190 in Ulster (including 24 in Ballymena Union, 48 in Belfast Union, 14 in Cavan Union, and 10 in Magherafelt Union), and 19 in Connaught. In Ulster the rate represented by deaths from diphtheria was 11·7 per 100,000 of the population, and in Connaught, 2·6.

Whooping-cough.—Deaths from this disease, which had fallen from 1,493 in 1890, to 1,280 in 1891, further fell last year to 1,154, or 24·9 per 100,000 of the population, being 4·3 under the average rate for the ten years 1882–91. The 1,154 deaths in 1892 were distributed as follows:—263 in Leinster (including 100 in the North, and 66 in the South Dublin Union), 466 in Munster (including 68 in Cork Union, and 38 in Kilrush Union), 361 in Ulster (of which 151 were in Belfast Union, 33 in Newtownards Union, and 32 in Londonderry Union), and 64 in Connaught. The respective rates for the four provinces were—Leinster, 22·1 per 100,000 of the population; Munster, 39·7; Ulster, 22·3; and Connaught, 8·8.

Fever.—The total number of deaths from the several forms of continued fever was 1,192, being 116 under the number for the preceding year, and 500 below the average for the ten years 1882–91. The rate represented by the deaths for last year was 25·7 per 100,000 of the population, against an average of 34·6 for the preceding ten years, showing a diminution in the mortality rate equivalent to a decrease of 26 per cent. The deaths from "fever" in Leinster were equal to 27·0 per 100,000 of the population; in Munster the rate was 27·1 per 100,000; in Ulster, 23·6; and in Connaught, 23·6.

The 1,192 deaths from "fever" consist of 268 from typhus (being 2 over the number for 1891, but 218, or 45 per cent. below the average for the ten years 1882–91), 714 from enteric fever, being 145 under the number for 1891, but 90 below the average for the ten years), and 210 from simple continued and ill-defined fever, being little more than one-half of the average number under that heading in the preceding ten years. It will be observed from Table X., page 12, that as regards the distribution of the deaths through the four provinces, the highest rates for typhus were in Munster and Connaught, and the highest for enteric fever in Leinster and Ulster, The deaths from enteric fever in Dublin and Belfast form about one-third of the total number for Ireland, but the disease was not as fatal in those cities in 1892 as it had been during the three years preceding. The respective numbers for Belfast Union were 236 deaths in 1889, 190 in 1890, 156 in 1891, and 115 in 1892, and for the two Unions of Dublin North and Dublin South 231 in 1889, 168 in 1890, 185 in 1891, and 132 in 1892.

In proportion to the living at the same age, "fever" was most fatal at the age-periods 25 and under 35 years and 15 and under 20, for the former of which the rate was 34·07 per 100,000 and for the latter 33·35, and least so amongst persons aged 65 and under 75, the rate being 13·26 per 100,000.

[Table XI.

Erysipelas.—The number of deaths from erysipelas was 170, being equal to the number for the preceding year, but 64 under the average for the ten years 1882–91.

Puerperal Fever.—The number of deaths from this disease is 275, being 38 under the average for the preceding ten years, but 39 over the number for the year 1891.

Influenza.—For the ten years 1864–73 (during the greater portion of which period there was not any epidemic outbreak of the disease), the average annual number of deaths from influenza registered in Ireland was 166, or 0·3 per 10,000 of the population, the yearly number ranging from 311 in 1864 to 96 in 1868; for the following ten years (1874–83) the average number was 82, the highest being 124 in 1875, and the lowest 39 in 1882; and for the six years, 1884–9, the average was 34 only, the numbers varying from 21 to 44. In 1890 the deaths from the disease amounted to 1,712, or 3·6 per 10,000 of the population; in the following year they fell to 891, or 1·9 in every 10,000 living; but in the year 1892 they rose to 3,742 (1,831 males and 1,911 females), or 8·1 in every 10,000 of the population, and equal to 4·2 per cent. of the deaths from all causes. The 3,742 deaths in 1892 comprise 640 of children under 10 years of age, and 2,025 of persons aged 55 years and upwards. In the province of Leinster the influenza death-rate in 1892 was 9·6 per 10,000 of the population; in Munster, 7·8; in Ulster, 7·0; and in Connaught, 7·6. Although these figures show that the epidemic was pretty evenly distributed over the provinces, the county rates range from 3·8 per 10,000 in Galway county and 4·2 in Antrim to 14·5 in Wicklow.

The Table (XII.) on the opposite page shows, by Sexes and Age-Periods, the distribution of the deaths from influenza through the several counties.

[TABLE.

TABLE XII.—Showing, by Provinces and Counties, the number of Deaths from Influenza at each of five Age-Periods registered in Ireland during the year 1892, with the rate per 10,000 of the population represented by the deaths at all ages.

	Females,	2,385,797	288	121	132	302	1,068		

Diarrhœa and Dysentery.—The mortality from these diseases was considerably below the average, the number of deaths being 1,186, or 25·6 per 100,000 living, against an average of 1,421, or 29·1 per 100,000 for the ten years 1882-91.

The rate for Leinster in 1892 was 27·4 per 100,000 of the population; for Munster, 20·4 ; for Ulster, 32·5 ; and for Connaught, 13·2. Of the 325 deaths from diarrhœa and dysentery in the province of Leinster, 208 occurred in one or other of the two unions of Dublin North, and Dublin South; and of the 526 deaths in Ulster, 273 were registered in Belfast union.

Simple Cholera.—Ninety-three deaths were ascribed to this disease, viz. :—28 in Leinster, 9 in Munster, 51 in Ulster, and 5 in Connaught.

Three males and 2 females died from *Hydrophobia.*

II.—Parasitic Diseases.

There were only 52 deaths from diseases of this class.

III.—Dietetic Diseases.

The deaths from dietetic diseases number 177 ; they comprise 155 from intemperance, 39 of which (35 males and 4 females) were caused by delirium tremens, and 116 (92 males and 24 females) come under the head of chronic alcoholism. The number of deaths from intemperance registered in the preceding year was 131.

IV.—Constitutional Diseases.

From diseases termed "constitutional" there resulted 16,239 deaths (7,616 males and 8,623 females), affording a rate of 1 in 5·5 of all the deaths, and equal to 350 in every 100,000 of the population.

Phthisis or Pulmonary Consumption caused 10,048 deaths (4,641 males and 5,407 females), being equal to 216·6 in every 100,000 persons, against an average annual rate of 211·7 per 100,000 for the previous ten years.

As heretofore, Leinster and Ulster yield the highest rates, and Connaught the lowest. The rates for the four provinces are as follow :—Leinster, 242 per 100,000 of the population; Ulster, 238 ; Munster, 195 ; and Connaught, 143.

Of the 3,851 deaths from phthisis in Ulster, 1,192 occurred in Belfast union, the number being equal to 411 per 100,000 of the population according to the Census of 1891, and the 2,877 fatal cases of the disease in Leinster comprise 1,288, or 368 per 100,000 of the population, registered in the unions of Dublin North and Dublin South.

Of the total number of deaths from phthisis in Ireland, 7,574, or 75 per cent., were of persons aged 15 and under 45 years of age.

Mesenteric Disease.—The deaths from mesenteric disease number 1,116—517 males and 599 females.

Gout.—Only 23 deaths from gout were registered (18 males and 5 females).

Cancer.—There were 2,221 deaths (1,004 males and 1,217 females) tabulated under this heading, against an average of 2,029 for the ten years 1882–91.

The following Table shows, by Sexes and Age-periods, the deaths from Cancer registered during the year 1892, arranged according to the part of the body affected by the disease, in so far as that information was contained in the Returns; also the number of deaths to 100,000 of the living at same age. In 140 instances the organ or portion of the body affected was not stated. It will be observed from the Table that the deaths entered under the first ten headings therein, which relate to various parts of the head, neck, and throat, amount to 404, and that of these, 288, or more than two-thirds, were deaths of males; 564 of the classified cases were deaths from cancer of the stomach; 253 females died from cancer of the breast, and 157 females from cancer of the uterus. The Table shows also the total deaths from cancer in each of the ten years, 1882–91, arranged by Age-periods.

* Including 7, kidney; 6, larynx; 5, nose; 3, spleen.

V.—Developmental Diseases.

The deaths in this class amount to 19,627, of which 19,150 (8,667 males and 10,483 females), or 21·3 per cent. of the deaths from all causes, were ascribed to "old age." Of the remaining 477 deaths, 392 are tabulated under the head of "premature birth"; 17 were caused by atelectasis, 10 by cyanosis, 27 by spina bifida; &c.

VI.—Local Diseases.

The number of deaths from "local diseases" registered amounted to 36,195 (18,458 males and 17,737 females), or 40·2 per cent. of the deaths from all causes.

Diseases of the Nervous System.—From this group of diseases there resulted 7,724 deaths—4,065 males and 3,659 females. They include 2,559 from convulsions (nearly all children), 1,512 tabulated under the head of "hemiplegia, brain paralysis"; 1,190 from apoplexy; 847 from inflammation of the brain or its membranes, 329 from epilepsy, 390 from insanity (general paralysis of the insane), 11 (4 males and 7 females) from chorea or St. Vitus's dance, 222 from softening of the brain, &c.

Diseases of the Circulatory System.—Diseases of the circulatory system caused 5,777 deaths—2,948 males and 2,829 females.

*Diseases of the Respiratory System.**—The deaths from these diseases last year amount to 15,830, 7,992 males and 7,838 females—or 341·3 in every 100,000 of the population, against an average of 15,254 or 312·7 per 100,000 of the estimated mean population for the ten years, 1882–91, and higher than the rate for any of those years, except 1891, in which the rate was 345·9. The respective rates for the Provinces, in 1892, are Leinster, 387 per 100,000 persons; Munster, 332; Ulster, 358; and Connaught, 212.

Of the 15,830 deaths from these causes 10,433 (4,939 males and 5,494 females), resulted from bronchitis, being 338 under the number from that disease in the preceding year; 3,592 (2,125 males and 1,467 females) were from pneumonia or inflammation of the lungs; 590 from croup; 315 from asthma and emphysema; 233 from pleurisy; 81 from laryngitis, &c.

Diseases of the Digestive System.—These diseases caused 4,172 deaths (2,092 males and 2,080 females), including 368 from enteritis or inflammation of the bowels; 377 from peritonitis or inflammation of the covering of the bowels; 403 from ileus or obstruction of the bowels; 140 from hernia; 13 (6 males and 7 females) from fistula; 251—160 males and 91 females—from cirrhosis of liver; &c.

Diseases of the Urinary System.—To the various affections of this order of diseases 1,429 deaths (967 males and 462 females) were ascribed. Of these deaths, 608 (353 males and 255 females) were from Bright's disease, 204 from acute nephritis or inflammation of the kidneys; 20 from ischuria or suppression of urine; 7 from stone in the bladder; 27 from uræmia, &c.

The remaining deaths from Local Diseases comprise 50 from *Diseases of the Lymphatic System and of Ductless Glands*; 595 from *Diseases of the Reproductive System* (including 192 from diseases of the Organs of Generation, and 403 from the Accidents of Childbirth), 315 from *Diseases of the Organs of Locomotion;* and 248 from *Diseases of the Integumentary System.*

VII.—Violent Deaths.

The number of violent deaths registered during the year is 1,965 (1,347 males and 618 females), or 42·4 in every 100,000 of the population, being slightly over the average rate for the ten years 1882–91. Accidents or negligence caused 1,735 of these deaths (including 382 from burns or scalds and 337 from drowning); there were 88 cases of homicide (murder and manslaughter), and 139 of suicide, and 3 men were executed.

Inquests.—There were 2,165 inquests reported to the Registrars during the year 1892 being 1 inquest to every 42 deaths registered.

AGES.

Deaths of infants under 1 year old numbered 10,938, being equal to 10·5 per cent. of the number of births registered.

Amongst children under 5 years of age 18,091 deaths occurred—a mortality equal to 39·1 in every 1,000 of the estimated number of the living at that age. Of these, 9,602 were boys and 8,489 girls; the former number representing 40·8 in every 1,000 boys, and the latter 37·3 in every 1,000 girls under 5 years old.

* Exclusive of Phthisis, or Pulmonary Consumption, for which see "Constitutional Diseases."

The deaths of persons aged 65 years and upwards are equivalent to 10·9 per cent. of the living at that age.

Among the deaths registered are 742 of persons stated to have been aged 95 years or upwards—332 males and 410 females; of these 190 (74 males and 116 females) were returned as having been 100 years or upwards. In the absence of public records for remote periods, absolute verification of the ages of very old persons is not obtainable, but secondary inquiries having been made as regards persons returned during the year 1890 as centenarians, it was found, in almost every instance, that so far as the Registrars could ascertain the age was correctly stated.

EMIGRATION.

According to the Returns obtained by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several Irish seaports, the number of emigrants (natives of Ireland), who left Ireland during the year 1892 amounted to 50,867; of these 25,495 were males and 25,372 were females. Of the whole number, 7,148 were from the Province of Leinster; 20,050 from Munster; 11,465 from Ulster; and 12,204 from Connaught.

Of the total emigrants from Ireland in 1892, 9·2 per cent. were under 15 years of age; 83·1 per cent. were between 15 and 35 years old; 7·7 per cent. were 35 or upwards; and in 15 instances, the ages were not specified.

PRICES OF PROVISIONS, AND PAUPERISM.

The average price of the 4 lb. loaf in Dublin was 6¼*d.** Oatmeal (1st quality) averaged 15*s.* 5*d.* per cwt. in Dublin, being equal to the average price for 1891; the average prices of potatoes in Dublin ranged from 2*s.* 2*d.* to 2*s.* 11*d.* per cwt., against 3*s.* 6*d.* to 4*s.* 2*d.* in 1891; and those of beef from 46*s.* to 58*s.* per cwt., against 49*s.* 6*d.* to 61*s.* 6*d.* in 1891.

Table XIV.—Average Prices in Dublin of Bread, Oatmeal, Potatoes, and Beef, during the years 1882–92, and the Average Number of Persons in Ireland receiving In-Door and Out-Door Relief on Saturdays in those years; also the Average Prices of Provisions and the Average Number of Persons in Receipt of Relief during each quarter of the year 1892.

* Prices for the years 1882–7, and the first two quarters of 1888, were derived from Returns furnished by Messrs. Manders & Co., those for the third and fourth quarters of 1888 and for the years 1889, 1890, 1891, and 1892, from Returns received from "Bolands, Limited," and Messrs. Johnston & Co. (or Johnston, Mooney, and O'Brien, Limited)—the prices quoted for these two firms including delivery.

† Compiled from Returns furnished by the Local Government Board.

Surveying the period covered by the several Tables in this Report, *i.e.*, 1892, and the ten years preceding, it is found that beef was lowest in the year 1887, when the average prices ranged from 44*s.* to 53*s.* 6*d.* per cwt.; oatmeal (1st quality), was cheapest in 1889, when the average price was 13*s.* 7*d.* per cwt.; and potatoes, in 1888, when the average range of prices was from 2*s.* 2*d.* to 2*s.* 9*d.* per cwt. The highest average price of oatmeal was 17*s.* 6*d.* in 1884 and 1885; the highest range for potatoes, 3*s.* 9*d.* to 4*s.* 10*d.* per cwt. in 1883, and for beef, 66*s.* 6*d.* to 77*s.* per cwt. in 1883.

From Returns, for which I am indebted to the Local Government Board, it appears that the average number of workhouse inmates in Ireland on Saturdays during the year 1892 was 41,582, being 162 under the average for the preceding year; and that the average number of persons receiving out-door relief was 59,734, or 2,794 under the corresponding number for 1891.

THE WEATHER.

The following particulars and those given on pages 22–44, which are inserted by the kind permission of the Editor of the Dublin Journal of Medical Science, have been derived from Returns of Meteorological Observations taken in Dublin City during the years 1872–92, by J. W. Moore, Esq., M.D., F.R.C.P.I., F.R. MET. SOC.; and published in the Journal during the years 1892–93. The Tables on pages 184–186 also, are founded on Dr. Moore's observations.

The mean Atmospherical Pressure has been obtained from daily readings of the barometer at 9 A.M. and 9 P.M., corrected and reduced to 32° Fahrenheit at the mean sea level. The Mean Temperature values have been deduced from the maximal and minimal readings of the thermometer in the shade. The Rainfall is that measured daily at 9 A.M. A *rainy day* is one on which at least one-hundredth (·01) of an inch of rain falls within the twenty-four hours from 9 A.M. to 9 A.M.

The *Mean Height of the Barometer* during the year 1892 was 29·922 inches. The highest observed reading was 30·687 inches at 9 P.M. on March 22nd. The lowest observed reading was 28·883 inches, at 7.0 A.M. on October 29th. The extreme range of atmospherical pressure was 1·804 inches compared with 2·624 inches in 1891.

The *Mean Temperature* of the year, deduced from the arithmetical mean of the maximal and minimal readings of the thermometer in the shade was 48·4°. The highest reading was 76·8° on June 26th; the lowest reading was 21·9° on December 27th and 28th. The average mean temperature for the years 1872–91 calculated in the same way, was 48·6°. The mean temperature deduced from the daily readings of the dry bulb thermometer at 9 A.M. and 9 P.M. was 47·5°.

Rain fell on 196 days, including snow or sleet on 31 days, and hail on 39 days. The average number of rainy days in the years 1872–91 was 199·3. The total rainfall measured 25·644 inches compared with an average of 28·426 inches in the twenty years 1872–91. During the first half of 1892 (January to June, inclusive) the rainfall was 11·770 inches on 97 days; during the second half (July to December, inclusive) 13·874 inches fell on 99 days.

As regards the *Direction of the Wind*. 732 observations were made during the year, with this result—N., 41; N.E., 62; E., 69; S.E., 60; S., 58; S.W., 96; W., 192; N.W., 114; Calms, 40.

I have the honour to be

Your Excellency's faithful servant,

THOS. W. GRIMSHAW,

Registrar-General.

GENERAL REGISTER OFFICE,
CHARLEMONT HOUSE,
Dublin, 15th December, 1893.

METEOROLOGICAL OBSERVATIONS

FOR EACH MONTH OF THE YEAR 1892.

By J. W. MOORE, Esq., M.D., F.R.C.P.I., F.R. MET. SOC.

(Extracted from the *Dublin Journal of Medical Science.*)

JANUARY.—An inclement, cold, and cloudy month.

A period of cold, which was ushered in by frequent snowstorms early in the month, lasted, with slight and temporary intermissions, until the 23rd, when, as in January, 1891, the southwesterly type of weather became permanently established over Western Europe, strong S.W. to W. winds, high but variable temperature, and frequent showers and gales prevailing day after day to the end of the month. To this decided change is due the fact that the mean temperature was only 2·6° below the average, notwithstanding the cold of the first three weeks of the New Year.

In Dublin the arithmetical mean temperature (38·8°) was decidedly below the average (41·4°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 38·5°. In the twenty-seven years ending with 1891, January was coldest in 1881 (M. T. = 32·2°), and warmest in 1875 (M. T. = 46·6°). In 1867 the M. T. was 35·7°, and in 1865 it was 37·8°. In 1871 and in 1886 the M. T. was 37·9°; in 1879 (the "cold year") it was 35·3°. In 1888, the M. T. was 42·1°; in 1889 it was 42·4°; in 1890 it was 44·5°; and in 1891 it was 40·1°. As a general rule, January in Dublin is not colder, but a shade warmer, than December. This is owing to the full development in January of a winter area of low pressure over the Atlantic, to the north-westward of the British Isles, and to a resulting prevalence of S.W. winds in their vicinity. January, 1892, proved an exception to this rule, the M.T. being 4·2° below that of December, 1891 (43·0°).

The mean height of the barometer was 29·857 inches, or 0·017 inch below the corrected average value for January—namely, 29·874 inches, and as much as 0·228 inch below the mean for January, 1891—namely, 30·085 inches. The mercury rose to 30·484 inches at 3 p.m. of the 25th, and fell to 29·125 inches at 2 p.m. of the 16th. The observed range of atmospherical pressure was, therefore, as much as 1·359 inches—that is, a little less than one inch and four-tenths.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 38·5°, or 3·8° below the value for December, 1891. Using the formula, *Mean Temp.* = *min.* + (*max.*—*min.* × ·52), the M. T. becomes 38·9°, compared with a twenty-five years' average of 41·5°. The arithmetical mean of the maximal and minimal readings was 38·8°, compared with a twenty-five years' average of 41·4°. On the 29th the thermometer in the screen rose to 54·0°—wind, W.; on the 10th the temperature fell to 22·2°—wind, N.W. The minimum on the grass was 16·0° on the last-named date.

The rainfall was 1·698 inches, distributed over 20 days. The average rainfall for January in the twenty-five years, 1865-89, inclusive, was 2·200 inches, and the average number of rainy days was 17·3. The rainfall, therefore, was considerably below the average, while the number of rainy days was equally above it. In 1877 the rainfall in January was very large—4·322 inches on 25 days; in 1869, also, 4·258 inches fell—on, however, only 18 days. On the other hand, in 1876, only ·406 of an inch was measured on but 9 days; and in 1880, the rainfall was only ·563 of an inch on but 8 days. In January, 1886, 3·244 inches of rain were measured on as many as 26 days; in 1887 ("the dry year"), 1·816 inches fell on 16 days; in 1888, 1·247 inches on 9 days; in 1889, 2·213 inches on 16 days; in 1890, 2·975 inches on 21 days; and in 1891, only ·672 of an inch on 14 days.

Solar halos were seen on the 15th and 21st. Lunar halos were seen on the 9th and 11th. There was an aurora borealis on the night of the 5th. The atmosphere was foggy on the 18th and five following days, as also on the 31st. High winds were noted on 15 days, reaching the force of a gale on six days—the 7th, 10th, 16th, 27th, 28th, and 29th. Hail fell on the 7th and 10th, and snow or sleet on the 3rd, 6th, 7th, 8th, 9th, 10th, and 14th. Temperature exceeded 50° in the screen on 6 days, compared with only 5 days in January, 1891, 17 days in January, 1890, and 8 days in January, 1889; while it fell to or below 32° in the screen on 15 nights, compared with 7 nights in January, 1891, 1 night in January, 1890, and 3 nights in January, 1889. The minima on the grass were 32°, or less, on 25 nights, compared with 21 nights in January, 1891, 15 nights in January, 1890, and 16 nights in January, 1889.

At the beginning of the month the weather was cold but fine. Very inclement, winterly weather held during the week ended Saturday, the 9th, which proved to be the coldest experienced in Dublin since the present winter began. The type of distribution of atmospherical pressure was markedly cyclonic in the N. and N.E., anticyclonic in the S.W. of Europe. A series of deep depressions passed southeastwards across Scandinavia and the Baltic, while a succession of secondary, or subsidiary, depressions travelled in the same direction across the British Islands. Hence fresh or strong winds and gales from W.S.W. to N. were felt in Scotland and Ireland, where snow, hail, and sleet fell in large quantities on several days. On Tuesday, the 5th, a temporary rise of the thermometer occurred in front of one of the depressions and drizzling rain fell in Dublin, but next day, after rain and snow, the weather cleared, becoming fine and cold. At night a heavy fall of snow occurred, and this was followed on Thursday afternoon by a downright "blizzard." On Friday, also, snowstorms occurred over nearly the whole of Ireland, and on Saturday a sharp frost prevailed, which became intense in the evening. In Dublin the mean height of the barometer was 29·764 inches, pressure ranging between 30·261 inches at 9 a.m. of Monday (wind N.W.), and 29·232

inches at 4 p.m. of Thursday (wind W.). The corrected mean temperature was 34·2°, the mean dry bulb readings at 9 a.m. and 9 p.m. being 33·0°. The screened thermometers rose to 45·4° on Tuesday and fell to 24·0° on Saturday, when the grass minimum was 17·8° at 9 p.m. The rainfall (almost entirely in the form of snow and hail) was ·283 inch on five days. Of this amount ·104 inch fell on Friday. The prevailing wind was N.W. Aurora borealis was seen on Tuesday night, and a lunar halo appeared on Saturday evening.

Very cold, inclement weather continued through the week ended Saturday, the 16th, but in Ireland a decided thaw set in on Friday, and was followed by a gale from S. to S.E. and heavy rain on Saturday. Up to this time the changes of atmospherical pressure over North-Western Europe were very erratic and irregular. On Sunday a well defined depression lay over Brittany and Normandy, and caused a strong N.E. wind on the east coast of Ireland, where a temporary thaw set in, accompanied by hail showers and some thunder and lightning at 10 p.m. In the early morning of this day the frost had been very intense in Central Ireland—at 8 a.m. the thermometer read 13° at Parsonstown, and even in the City of Dublin temperature had been down to 22·2° in the screen and to 16·0° on the ground. Monday was again very cold, and at night frost returned. Both the barometer and thermometer now became very unsteady and so continued until Friday, when an extensive and deep depression began to "edge in" from the Atlantic. This caused steep gradients for southerly winds, a rise of temperature, and heavy rain on Saturday. In Dublin the mean height of the barometer was 29·645 inches, pressure ranging between 30·095 inches at 9 a.m. of Monday (wind N.) and 29·125 inches at 2 p.m. of Saturday (wind S.E.). The corrected mean temperature was 34·4°, the mean dry bulb reading at 9 a.m. and 9 p.m. was 34·5°. The screened thermometers rose to 41·6° on Saturday, having fallen to 22·2° on Sunday. The rainfall amounted to ·749 inch on three days, ·618 inch being measured on Saturday. The wind was variable in direction.

The week ended Saturday, the 23rd, witnessed the gradual establishment of a warm southwesterly current over the whole of the British Islands, while the weather remained extremely cold in Russia, Scandinavia, and Central Europe. The period opened with a gale from S.E. and heavy rain in Dublin, but the wind moderated early on Sunday morning, and a spell of calm, damp, foggy, dull weather set in, lasting until Thursday. The fog was particularly dense on Tuesday morning, when temperature was slightly below freezing point in the screen. On Thursday the south wind freshened in Ireland, blowing a moderate or fresh gale on the southern and western coasts. The last two days were changeable and rainy or showery at times. On Saturday a very decided rise of temperature took place, the thermometer exceeding 50° in Dublin for the first time since December 29, 1891. On the Continent the cold was very intense during the week. At Munich the thermometer fell to 3° on Thursday morning, and at Haparanda, on the Gulf of Bothnia, the minimal temperatures were −13°, −17°, −7°, −14°, −17°, −15°, and −19° (?) respectively. In Dublin the mean height of the barometer was 29·759 inches, pressure ranging between 29·444 inches at 9 a.m. of Sunday (wind S.E.) and 29·979 inches at 9 p.m. of Wednesday (wind calm). The corrected mean temperature was 40·0°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 39·6°. The screened thermometers rose to 51·8° on Saturday, having fallen to 29·0° on Thursday. Rain fell in measurable quantity on four days—the total amount being ·344 inch, of which ·168 inch was referred to Friday. The atmosphere was often calm, but S.E. winds prevailed at the beginning, and S.W. winds at the close of the week.

As regards the week ended Saturday, the 30th, the change to milder weather which began in the course of the previous week was completed in the period now under review—the mean temperature of which was considerably above the average. Throughout the week the barometer was highest over the Atlantic to the southward of Ireland and over the Bay of Biscay; lowest over the Norwegian Sea. The gradients, were, therefore, for westerly winds; and they were particularly steep on Friday and Saturday. At 8 a.m. of Friday the barometer readings decreased from 30·67 inches at Biarritz to 28·87 inches at Bodö in the N.W. of Norway. On Saturday morning the reading at Biarritz was 30·64 inches: at Christiansund in Norway, it was 28·45 inches, or 2·19 inches lower. At first the weather was rather cold, but on Tuesday it became very mild and so continued to the end—Friday was the warmest day of all, for the thermometer rose to 58° at Aberdeen, 55° at Donaghadee, 54° in Dublin, and 53° in London. It is not a little remarkable that intense cold held in Russia during the week, the thermometer, for example, reading −35° at Moscow at 8 a.m. of Wednesday. From Tuesday until Saturday the wind blew strongly—at times with the force of a fresh gale—from S.W. or W. In Dublin the mean height of the barometer was 30·163 inches, pressure ranging from 30·484 inches at 3 p.m. of Monday (wind, S.W.) to 29·815 inches at 9 a.m. of Wednesday (wind, S.W.). The corrected mean temperature was 45·8°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 45·4°. The screened thermometer rose to 54·0° on Friday, having fallen to 35·9° on Monday. Rain fell on six days in measurable amount, but the quantity was not large—only ·143 inch, of which ·074 inch was referred to Wednesday. The prevailing winds were W. and S.W.

Sunday, the 31st, was fine but cloudy. In the afternoon, the weather became very soft and mild.

In Dublin, the rainfall up to January 31, 1892, has amounted to 1·698 inches on 20 days, compared with a twenty-five years' (1865–1889) average of 2·200 inches on 17·3 days.

At Knockdolian, Greystones, Co. Wicklow, only 1·045 inches of rain fell on 15 days. The heaviest falls in 24 hours were ·200 inch on the 16th, and ·170 inch on the 17th.

FEBRUARY.—No greater contrast could there be than between the weather of February, 1892, and that of February, 1891, which proved a record month for drought, mildness, calm, and fogginess combined.

The month now under review was, on the contrary, wet, cold, stormy, and cloudy. Rain or snow fell in measurable quantity on 19 out of 29 days, and on as many as 10 days the wind reached the force of a gale in Dublin. Had it not been for a mild period from the 6th to the 12th, February, 1892, would have proved one of the coldest on record.

In Dublin the mean temperature (41·3°) was 1·5° below the average (42·8°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 40·8°. In the twenty-seven years ending with 1891, February was coldest in 1873 (M. T. = 37·9°), and warmest in 1869 (M. T. = 46·7°). In 1886 the M. T. was 39·7°. In the year 1879 (the "cold year") it was 40·1°. In 1888 it was as low as 38·6°; in 1889 it was 40·3°; in 1890 it was 41·5°; and in 1891 it was as high as 44·7°.

The mean height of the barometer was 29·787 inches, or 0·068 inch below the average value for February—namely, 29·855 inches, and ·611 inch below the mean pressure in February, 1891. The mercury rose to 30·666 inches at 9 a.m. of the 13th, and fell to 29·136 inches at midnight of the 20th. The observed range of atmospherical pressure was, therefore, 1·530 inches—that is, a little over an inch and a half.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 40·8°, or 2·3° above the value for January, 1892. Using the formula, *Mean Temp.* = *Min.* × (*max—min.* + ·50), the M. T. becomes 41·3°, compared with a twenty-five years' average of 42·8°. On the 7th the thermometer in the screen rose to 54·6°—wind, W.; on the 17th the temperature fell to 26·1°—wind, W.S.W. The minimum on the grass was 21·1° on the 17th.

The rainfall was 2·119 inches, distributed over 19 days. The average rainfall for February in the twenty-five years, 1865-89, inclusive, was 2·150 inches, and the average number of rainy days was 17·2. The rainfall, therefore, was slightly below the average, while the rainy days were above it. In 1883 the rainfall in February was large—3·752 inches on 17 days; in 1879, also, 3·706 inches fell on 23 days. On the other hand, in 1873, only ·925 of an inch was measured on but 8 days; in 1890, only ·802 of an inch fell on but 7 days; and in 1887 only ·541 of an inch fell on 11 days. The rainfall in 1887 was much the smallest recorded in February for very many years. But the record for 1891 is probably unparalleled—·042 inch on two days. The nearest approach to this drought was in September, 1865, when only ·056 of an inch of rain was measured on but 3 days.

There was no snow, sleet, or hail in Dublin in February, 1891, but in the present month snow or sleet fell on 8 days—the 1st, 2nd, 15th, 16th, 17th, 18th, 19th, and 20th; while hail was observed on 5 days—the 15th, 16th, 18th, 21st, and 29th.

The atmosphere was foggy on 6 days—namely, the 4th, 6th, 9th, 25th, 26th, and 27th. The amount of clouds—68·5 per cent.—was in excess of the average—66 per cent. High winds were noted on 14 days, reaching the force of a gale on no less than 10 occasions—namely, the 1st, 2nd, 7th, 8th, 15th, 16th, 19th, 20th, 21st, and 23rd.

The temperature exceeded 50° in the screen on six days, compared with 6 days in January, and as many as 14 days in February, 1891; while it fell to or below 32° in the screen on 5 days, compared with 15 days in January, and with 2 in February, 1891. The minima on the grass were 32°, or less on 16 nights, compared with 25 nights in January, and 17 nights in February, 1891. On 6 days the thermometer failed to rise above 40° in the screen.

Very changeable weather prevailed throughout the period ended Saturday, the 6th. Large depressions passed eastwards or northeastwards across Scotland, the Norwegian Sea, and Scandinavia, causing frequent showers, storms, and sudden changes of temperature. The most serious and deepest of these depressions was observed on the evening of Monday, the 1st, when the barometer sank to 28·02 inches by 6 p.m. at Sumburgh Head in the Shetlands. In Dublin Monday broke during the prevalence of a gale from S.W. to W. On this day the weather turned much colder and falls of snow occurred during the ensuing night. Tuesday and Wednesday were cold, but chiefly fine and dry. Thursday was dull, with rain at times—in the evening the sky cleared. Friday was a fine day. Saturday proved dull, damp, foggy, mild, and rainy. A near conjunction of the Moon, Jupiter, and Venus in the southwestern sky was well observed on Monday evening, and on Friday the planets Jupiter and Venus were seen quite close together after dusk. In Dublin the barometer fell to 29·150 inches at 3 p.m. of Tuesday (wind, W.). On Monday the thermometer rose to 50·8° in the shade; on Tuesday it fell to 33·0°. The rainfall was ·242 inch on four days—·121 inch being measured on Monday. The prevailing winds were W. and S.W.

Very dull mild weather prevailed after Monday, the 8th, to the close of the week ended Saturday, the 13th. On Sunday a depression crossed Scotland in an easterly direction, causing fresh or strong westerly winds, and rain at many stations. A secondary disturbance followed at night, being heralded by lunar halos and accompanied by a gale and heavy rain early on Monday morning. The weather then cleared and remained fair and cool until 6 a.m. of Tuesday, when foggy, damp, cloudy weather set in. An anticyclone was at this time found over the S. of Ireland, the S.W. of England, and Brittany, as well as over the Atlantic to the southwestwards of the British Islands. This high pressure system daily increased in intensity, until on Saturday morning the barometer stood as high as 30·67 inches in Dublin, 30·70 inches at Valentia Island, and 30·73 inches at Belmullet. On Thursday night the sky cleared over the S.E. of England, where temperature consequently fell fast, so that frost occurred on Friday morning. A similar clearing of the sky took place in Dublin at midnight of Friday, resulting in a rapid decrease of temperature for the time being. By 8 a.m. of Saturday however, the sky had again become overcast. In Dublin the mean atmospherical pressure was 30·341 inches, or more than three-quarters of an inch above the value for the previous week (29·566 inches). The barometer fell to 29·730 inches at 4 p.m. of Sunday (wind, W.), and rose to 30·666 inches at 9 a.m. of Saturday (wind, N.N.W.). The mean temperature was 46·5°, the mean dry bulb temperature at 9 a.m. and 9 p.m. being 46·3°. The thermometers in the screen rose to 54·6° on Sunday and fell to 38·9° on Saturday. The rainfall was ·333 inch on three days, ·310 inch being referred to Sunday. The prevailing winds were W. and N.W. The percentage of cloud during the week was 75.

It is not often that, even in the variable climate of the British Islands, so complete a *volte-face* occurs in the weather of two consecutive weeks as that which we have now to chronicle. The week ending the 13th was dull, mild, and genial, with moderate westerly winds; the week now under

review was inclement, cold, and stormy, with frequent falls of snow and hail, and a prevalence of piercing, dry easterly winds. The change began early on Sunday morning with a rapid decrease of both pressure and temperature as an extensive depression advanced from the northward, passing in a southerly direction across Great Britain. A heavy shower of cold rain fell in Dublin at 3.30 p.m. of Sunday, the 14th, after which the sky cleared with ever-increasing cold. Snow, sleet, and hail fell on Monday, when the wind shifted to E., and finally rose to a gale. A new disturbance on Wednesday caused a temporary shift of wind to W., and a fall of snow, followed by a thaw. Next day the wind returned to the eastward and snow and hail fell in abundance. On Friday and Saturday a severe easterly gale prevailed with heavy snowstorms. At first the air was unusually dry, the relative humidity falling to 55 per cent. at 9 a.m. of Friday. Afterwards the air became damp and raw, with a gradual thaw on Saturday. The cold in central England was at times very intense —at Loughborough, in Leicestershire, the thermometer in the screen fell to 0° (zero) on Wednesday and to 4° on Friday, when the minimum at York also was 7°. On this day the unusually low reading —2° was recorded at Braemar in Scotland and Newton Reigny in Cumberland. In Dublin the mean pressure was 29·526 inches, the barometer ranging between 30·193 inches at 9 a.m. of Sunday (wind, W.) and 29·136 inches at midnight of Saturday (wind, E.). The corrected mean temperature was 35·1°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 34·6°. The screened thermometers rose to 48·6° on Sunday and fell to 26·1° on Wednesday. The rainfall consisted chiefly of snow and hail. It amounted to ·937 inch on 7 days. The heaviest fall was ·531 inch on Saturday. The prevailing winds were W.N.W. and E.N.E.

During the week ended Saturday, the 27th, the weather was for the most part dull, rainy, and cold, with persistent south-easterly winds and cloudy skies. A large anticyclone was found throughout over eastern and northern Europe, while a deep depression passed slowly away to sea from the S.W. of Ireland, to which locality it had advanced from the southward on Saturday, the 20th. At 8 a.m. of Sunday, the 21st, the barometer was as low as 28·89 inches at Valentia Island in Kerry, or exactly one inch lower than the reading in the Shetlands at the same time. During the previous night a whole gale to a storm from the eastward had been experienced in Ireland, where snow, sleet, and rain fell in large quantities. While the depression in the S.W. was gradually "filling up" and moving away over the Atlantic, the weather remained dull and wet, with strong and squally S.E. winds. On Friday atmospherical pressure became uniform over Ireland, where the sky cleared temporarily and the thermometer fell fast. Saturday proved gloomy and cold with a freshening easterly to north-easterly wind. In Dublin the mean height of the barometer was 29·671 inches, pressure increasing from 29·188 inches at 9 a.m. of Sunday (wind, S.E.) to 30·119 inches at 9 a.m. of Saturday (wind, E. by N.). The mean temperature was 42·2°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 42·4°. The screened thermometers rose to 47·7° on Friday and fell to 33·8° early on Saturday. The rainfall amounted to ·605 inch on five days. Of this quantity ·153 inch was measured on Tuesday. Thunder and lightning were rather prevalent in the south. The wind was constantly S.S.E. or S.E. until Saturday, when it backed to E.N.E.

The last two days of the month were cold, changeable, and for the most part dull. A shower of hail fell on the afternoon of the 29th.

In Dublin, the rainfall up to February 29, 1892, has amounted to 3·817 inches on 39 days, compared with ·714 inch on 16 days in the same period in 1891, and a twenty-five years' (1865–1889) average of 4·350 inches on 34·5 days.

At Knockdolian, Greystones, Co. Wicklow, 2·165 inches of rain fell in February on 16 days, and only 1·045 inches in January, on 15 days. The total fall to February 29th inclusive has been 3·210 inches, on 31 days.

March.—A remarkably cold, dry month, with scanty rainfall and a great prevalence of searching winds from polar quarters. The arithmetical mean temperature was only 39·1°, or 2·2° below that of February. The rainfall did not amount quite to an inch, and was distributed over only 9 days. The week ending Saturday, the 12th, was the coldest experienced in Dublin during the winter of 1891–92, and had it not been for a temporary rise of the thermometer to 55·7° on the 31st, the month would have proved the coldest March on record in Dublin, within the past thirty years at least. The amount of cloud was only 45·5 per cent. at 9 p.m., so that radiation by night was very active.

In Dublin the arithmetical mean temperature (39·1°) was considerably below the average (43·1°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 37·8°. In the twenty-seven years ending with 1891, March was coldest in 1867 and 1883 (M.T. = 39·0°). and warmest in 1868 (M. T. = 47·3°). In 1876 the M. T. was 41·1°, in 1879 (the cold year) it was 42·5°, in 1888 it was as low as 39·8°, in 1889 it was 44·0°, and in 1890 it was as high as 45·1°. In 1891, it was only 41·7°. As a general rule, February in Dublin is only a shade colder than March. This is due to the fact that the Continental anticyclone usually embraces the British Isles and Scandinavia in March, causing easterly winds. In the present year, however, February was actually 2·2° warmer than March.

The mean height of the barometer was 30·057 inches, or 0·141 inch above the corrected average value for March—namely, 29·916 inches. The mercury rose to 30·687 inches at 9 p.m. of the 22nd, and fell to 29·138 inches at 1 p.m. of the 15th. The observed range of atmospherical pressure was, therefore, 1·549 inches—that is, more than an inch and a half.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 37·8°, or 3·0° below the value for February, 1893. Using the formula *Mean Temp.*=*min.* + (*max.*—*min.* × ·485), the M.T. becomes 38·9°. The arithmetical mean of the maximal and minimal readings was 39·1°, compared with a twenty-five years' average of 43·1°. On the 17th the thermometer in the screen rose to 59·2°—wind, S.S.W.; on the 11th the temperature fell to 23·8°—wind, N.W. The minimum on the grass was 16·9°, also on the 11th.

The rainfall was only ·991 inch, distributed over only 9 days. The average rainfall for March in

the twenty-five years, 1865–89, inclusive, was 2·061 inches, and the average number of rainy days was 16·5. The rainfall, therefore, was much below the average, while the rainy days were also much below it. In 1867 the rainfall in March was very large—4·972 inches on 22 days; in 1888, 3·753 inches fell on 18 days; in 1866, also, 3·629 inches fell on 21 days. On the other hand, in 1871, only ·815 of an inch was measured on 12 days, and in 1874 only ·953 of an inch fell, also, on 12 days. In 1887 (the "dry year"), 1·485 inches of rain fell on 15 days; in 1889, 1·076 inches fell on, however, as many as 17 days; in 1890 the fall was as much as 3·693 inches on 17 days; but in 1891 only ·936 of an inch fell on 16 days.

The atmosphere was thick with dry smoke fog in the city on the 4th, 6th, 7th, 12th, 20th, 21st, 24th, 29th, 30th, and 31st. High winds were noted on only 4 days, reaching the force of a gale on only one occasion, the 18th. Snow or sleet occurred on the 2nd, 3rd, 9th, 10th, 13th, 14th, and 27th; and hail fell on the 1st, 2nd, 6th 7th, 9th, 12th, 14th, 21st, 27th and 28th. The temperature exceeded 50° in the screen on only 7 days, compared with 9 days in March, 1891, and 19 days in March, 1890; while it fell to or below 32° in the screen on as many as 16 nights, compared with 10 nights in March, 1891, and only 4 nights in March, 1890. The minima on the grass were 32°, or less, on 25 nights compared with 20 nights in March, 1891, and 16 nights in March, 1890. On 9 days the thermometer did not rise to 40° in the screen.

Very cold weather and parching winds with frequent, although not heavy, falls of snow, were reported from all parts of the United Kingdom and from the Continent during the period ending Saturday, 5th. Displays of aurora borealis were of frequent occurrence in Scotland and Scandinavia. The prevailing type of distribution of atmospherical pressure was anticyclonic in the north and cyclonic in the south. Hence easterly winds blew all over Central Europe and the British Islands. They were accompanied by dense clouds, and snow was in the air day after day, although the total fall did not yield a large rainfall measurement. On Wednesday and Thursday the thermometer did not rise above 32° all over the S.E. of England either by night or by day. In Dublin showers of sleety rain and hail fell on Tuesday, the 1st, and light snow was observed at frequent intervals on Wednesday and Thursday. On Friday evening the sky cleared temporarily, so that sharp frost set in. The clouds soon returned, however, but finally dispersed on Saturday afternoon, which proved fine and bright. In Dublin the barometer rose to 30·399 inches at 9 p.m. of Friday (wind, S.E.). On Tuesday the thermometers in the screen rose to 42·9°; on Friday they fell to 29·2°. The rainfall was ·034 inch on two days, nearly all of which fell as hail and snow. On Tuesday the measurement was ·028 inch. The wind blew constantly from points between N.E. and S. chiefly from E.

Extremely cold, winter-like weather held throughout the week ended Saturday, the 12th, the mean temperature of which in Dublin was lower than that of any other week during the past or rather current winter. At the beginning a large anticyclone stretched southwestwards from Scandinavia, across the North Sea and the British Islands, causing easterly winds and cold but dry weather. At this time deep depressions were advancing over the Iberian Peninsula from the southward, and were accompanied in that region by high temperatures, heavy rains, and gales. On Tuesday, however, a brisk and decided fall of the barometer took place in the north also, as an extensive depression formed over the Norwegian Sea. This system enlarged and spread southwards down the North Sea, causing strong W. to N. and N.E. winds and considerable falls of hail and snow on the British Islands. On Wednesday night another well-marked cyclonic system travelled rapidly southeastwards across Scotland and England, renewing the storms of hail and snow. On Thursday night thunder and lightning occurred at Wick and Shields. Severe frost was reported from many stations on nearly every night during the week. On Friday the weather moderated in Ireland, but temperature remained very low generally. In Dublin the mean pressure was 29·792 inches, the barometer being observed to range from 30·182 inches on Sunday at 9 a.m. (wind, calm) to 29·426 inches on Thursday at 7.30 a.m. (wind, N.N.W.)—the readings had been lower about 6 a.m. The corrected mean temperature was 33·6°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 32·2°. On Tuesday the screen thermometers rose to 44·4°, on Friday they fell to 23·8°, when also the minimum on the snow was 16·9°. The rainfall was ·215 inch, on three days. The precipitation was almost wholly in the form of snow and hail. The prevailing winds were N.W. and E.N.E.

The week ended Saturday, the 19th, is remarkable for a sudden bound from midwinter into spring. On Sunday morning the centre of a well-defined depression, which had crossed the Continent from Austria, was found over the North Sea off the coasts of Lincolnshire and Norfolk. The weather was very cold throughout the British Islands, and snow fell in many places. On Monday morning the same depression had advanced to Scotland, which country it covered completely, causing a continuance of wintry weather. At night the barometer fell fast as a new disturbance approached Ireland from the westward. The centre of this system passed in an easterly direction across St. George's Channel, South Wales, and central England to Holland, which it reached on Wednesday morning. It was accompanied by a decided rise of temperature and heavy rains in Ireland, England, and France, while the cold 'stiffened' in Scotland. On Wednesday morning the thermometer fell to 6° at Nairn, and even at 8 a.m. the temperature was only 13° at that station, compared with 51° at Valentia Island in Kerry. A new depression on Wednesday night caused a warm S.W. wind all over the British Islands, the thermometer rising 32° in 24 hours at Nairn. High day temperatures now set in, the thermometer recording 59° degrees on Thursday in London and Dublin, as well as at Parsonstown and Cambridge. On Friday the maximum was in London 61°, at Leith 62°. and at Cambridge 63°. At this time it blew hard in Ireland from S.S.E., but the weather was in other respects chiefly fine. Saturday was a lovely spring-like day. In Dublin the mean atmospherical pressure was 29·736 inches, the barometer ranging between 29·138 inches at 1 p.m. of Tuesday and 30·129 inches at 9 a.m. of Saturday (wind on both occasions being about E.S.E). The corrected mean temperature was 43·9°, the mean dry bulb temperature at 9 a.m. and 9 p.m. was 42·9°. On Sunday, the screened thermometers fell to 26·8°. On Thursday they rose to 59·2°. The rainfall was ·576 inch on two days, ·400 inch being referred to Monday. Snow fell on Sunday and Monday. The prevailing winds were S.W. and S.E. At the close of the week a vast anticyclone

had spread all over Northern and Western Europe from Russia, where the barometer exceeded 31 inches.

During the week ended Saturday, 26th, so far as Ireland is concerned, the weather was exceptionally fine and dry. The amount of cloud, however, was great, and temperature ruled rather low. At the beginning of the week an anticyclone, with central readings of the barometer above 30·8 inches, lay over the Baltic, while pressure was rather below 30 inches over the Bay of Biscay. An easterly wind consequently prevailed, but in Dublin dense cirri came up from W. in a higher air-current all day on Sunday. Next day the barometer rose steadily in Ireland and England as a new anticyclone spread in from the westward. This system developed until Wednesday, when the barometer rose to 30·76 inches at Belmullet, in Mayo. In Dublin a hail shower fell on Monday afternoon, Tuesday proved very fine, but early on Wednesday morning the sky became densely overcast, remaining so until Saturday. In this interval the anticyclone was dispersing, and an extreme reduction of pressure took place which was most decided over Northern Europe, so that at 8 a.m. of Saturday the barometer was as low as 28·75 inches at Bodö in Norway. Notwithstanding this and because the fall of the barometer was uniform and general, no very bad weather followed. In Dublin the mean height of the barometer was 30·253 inches, pressure ranging from 30·687 inches at 9 p.m. of Tuesday (wind, N.W.) to 29·640 inches at 4 p.m. of Saturday (wind, W.S.W.) The corrected mean temperature was 42·7°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 42·2°. The screened thermometers rose to 51·5° on Monday and fell to 33·0° on Tuesday. The winds were light and variable, chiefly from polar quarters. The amount of cloud was 71·4 per cent. There was a considerable rainfall over south-eastern England on Monday and Tuesday, and snow fell in Scotland on Saturday, but in Dublin no measurable rainfall occurred until Saturday night, when ·143 inch of rain was registered.

The closing period of the month (27th–31st, inclusive) was again very cold, the night-frosts being particularly sharp. Owing, however, to the clearness of the sky and the continuous bright sunshine by day, temperature showed a decided tendency to recover on the 30th and 31st. On the latter day the maximum was 55·7° in Dublin, but readings as high as 68° were recorded at York and Loughborough, and in Ireland the thermometer rose to 63° at Parsonstown and to 64° at Donaghadee. At the beginning of this period the Dublin mountains were deeply covered with snow. From the 28th an anticyclone stretched across Ireland and central England.

The rainfall in Dublin during the three months ending March 31st has amounted to 4·808 inches on 48 days, compared with only 1·650 inches on only 32 days during the same period in 1891, 7·470 inches on 45 days in 1890, 5·738 inches on 53 days in 1889, 6·097 inches on 41 days in 1888, and a twenty-five years' (1865–1889, inclusive) average of 6·411 inches on 51·0 days.

At Knockdolian, Greystones, Co. Wicklow, only ·995 inch of rain fell on 9 days during March; and the total rainfall since January 1, 1892, equals 4·205 inches on 40 days.

April.—Like April, 1891, this was a cold, rather dry and March-like month. The mean temperature, rainfall, and rainy days were all below the average. On six days, indeed, the thermometer rose above 60° in the shade, but on five nights it fell below 32°, even in the screen.

In Dublin the arithmetical mean temperature (46·2°) was 1·5° below the average (47·7·°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 45·3°. In the twenty-seven years ending with 1891, April was coldest in 1879 (the cold year), (M. T.=44·5°), and warmest in 1865 and 1874 (M. T.= 50·4°). In 1886, the M. T. was 46·3°, in 1887 it was as low as 45·1°, in 1888 it was (as in 1891) only 45·7°, in 1889 it was 46·1°, and in 1890 it was 47·3°.

The mean height of the barometer was 30·039 inches, or 0·189 inch above the average value for April—namely, 29·850 inches. The mercury was as high as 30·506 inches at 9 a.m. of the 1st, and fell to 29·655 inches at 9 a.m. of the 27th. The observed range of atmospherical pressure was, therefore, 0·851 inches—that is, a little less than nine-tenths of an inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 45·3°, or 7·5° above the value for March, 1892. Using the formula, *Mean Temp.* $=min.+(max.-min. \times \cdot 476)$, the value becomes 45·8°, or 1·6° below the average mean temperature for April, calculated in the same way, in the twenty-five years, 1865–89, inclusive (47·4°). The arithmetical mean of the maximal and minimal readings was 46·2°, compared with a twenty-five years' (1865–1889 inclusive) average of 47·7°. On the 20th, the thermometer in the screen rose to 63·8°—wind, S.W.; on the 15th the temperature fell to 27·3°—wind, N.N.W. The minimum on the grass was 22·0°, also on the 15th.

The rainfall was only 1·114 inches, distributed over 13 days. The average rainfall for April in the twenty-five years, 1865–89, inclusive, was 2·055 inches, and the average number of rainy days was 15·2. The rainfall, therefore, was considerably below the average, while the rainy days were also deficient. In 1877 the rainfall in April was very large—4·707 inches on 21 days; in 1882 also 3·526 inches fell on 20 days. On the other hand, in 1873, only ·498 of an inch was measured on 8 days; and in 1870 only ·838 of an inch fell, also on 8 days. The fall in 1890 was 1·575 inches on 14 days, and in 1891, 1·553 inches fell on 14 days.

Solar halos were seen on the 7th and 30th. There was a lunar halo on the 7th. The atmosphere was more or less foggy on the 1st, 2nd, 6th, 7th, 10th, 11th, 12th, 14th, 18th, and 19th. High winds were noted on only 3 days, and did not reach the force of a gale on any occasion. Snow or sleet fell on the 13th and four following days, while hail fell on the 13th, 14th, 15th, 16th, 18th, 25th, 26th, and 27th. The temperature exceeded 50° in the screen on 24 days, compared with 18 days in April, 1891, 7 days in March, 6 in February, and 6 in January. It rose above 60° on 6 days, and fell below 32° in the screen on 5 nights. The minima on the grass were 32°, or less, on 14 nights, compared with 25 nights in March, 16 in February, and 25 in January. The mean lowest temperature on the grass was 32·4°, compared with 34·1° in 1891 and 1890, 34·4° in 1889, 3.46° in 1888, and 31·6° in 1887.

The first two days of the month were beautiful, calm and frosty by night, brilliant by day, with light easterly sea breezes. The diurnal range of temperature was extremely large at inland stations —thus on Friday, the 1st, at Loughborough, in Leicestershire, the minimum was 26° and the maximum was 72°—range 46°; at Parsonstown the corresponding values were—28° and 68°, range 40°.

Most favourable weather prevailed during the week ended Saturday, the 9th. The range of atmospherical pressure was especially small, and temperature was much higher than for a long time past—the advance on the previous week being no less than 10·5°. Although the barometrical range was not large, the changes in pressure were frequent and irregular—particularly between Sunday and Wednesday, when rain fell in Ireland, Scotland, and Wales, but not heavily. In the interval from Tuesday evening to Thursday evening thunder and lightning occurred over France, the western half of the English Channel, and the extreme southwest of Ireland—the electrical disturbances seemed to pass in a northwesterly direction, skirting the southwestern edge of an anticyclone of no great height, which formed over the British Islands on Tuesday evening. Some very high day temperatures for the time of year (70° to 73°) were recorded daily in England up to Thursday, when temperature began to give way generally under the influence of a freshening easterly wind. Much haze and fog accompanied this fall of temperature—at least at night. The days, however, were fair and bright after Thursday. In Dublin the mean atmospherical pressure was 29·993 inches, the barometer being observed to range between 30·219 inches at 9 a.m. of Sunday (wind, E.), and 29·916 inches at 9 p.m. of Monday (wind, S.W.). The corrected mean temperature was 49·9°, or 10·5° above the value for the preceding week. The daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. were on an average 48·8°. The shade thermometers rose to 62·4° on Monday, having fallen to 40·2° on Sunday. Rain was measured on two days to the amount of ·073 inch, ·043 inch being credited to Tuesday, and ·030 inch to Monday. The prevailing winds were E. and E.N.E.

The week ended Saturday, the 16th, witnessed a plunge into midwinter with its attendant frosts and snows. The mean temperature was no less than 9·1° lower than that of the previous week (40·8° compared with 49·9°) and nearly all the precipitation was in the form of snow and hail. At the beginning the weather was fine and dry as well as moderately warm with light easterly breezes by day and some haze or fog by night, when the air periodically fell calm. During this period the diurnal range of temperature was very large at inland stations—at Cambridge the thermometer fell from 70° on Sunday the 10th to 29° during the ensuing night; at Parsonstown the extremes in the same time were—max. 67°, min. 31°. In Dublin the range was much less—max. 53·6°, min. 38·9° on Sunday. On Tuesday depressions began to pass southwards across Scandinavia and the North Sea, with the result that the wind freshened from N.W.N., and N.E., and falls of cold rain, hail, and snow became very general. This state of things lasted to the close of the week, which thus proved very inclement. In Dublin the mean height of the barometer was 29·849 inches, pressure ranging between 30·004 inches at 9 a.m. of Sunday (wind, E.N.E.), and 29·662 inches at 2 p.m. of Saturday (wind, N.N.E.). The corrected mean temperature was 40·8°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 40·0°. The screened thermometers rose to 56·6° on Monday and fell to 27·3° on Friday, when also the grass minimum was only 22·0°. The rainfall amounted to ·283 inch on three days. It was almost entirely in the form of snow and hail. On Tuesday the measurement was ·176 inch. The prevailing winds were N.E. and N.W. At first the nights were calm and foggy.

Opening with very severe winterly weather, the week ended Saturday, the 23rd, ultimately proved very favourable, genial and springlike. The mean temperature of Easter Day, 1892, was in Dublin only 36·0°, or 0·7° below that of Christmas Day, 1891. In the early morning the ground was covered with snow, and snow and sleet fell in frequent showers during the afternoon. Monday was fine, but very cold, with a dry nipping air—at night sharp frost occurred, the thermometer falling to 29·3° in the screen and to 23·4° on the grass. On Tuesday a change to much milder weather began. Up to this time the barometer had been lowest over the North Sea, highest off the west of Ireland—hence a prevalence of northerly winds and low temperatures. From Tuesday onwards the area of lowest pressure was found in the N.W. and N., so that southwesterly to westerly winds predominated, accompanied by much higher temperatures and passing showers at times. A wave of high pressure passed eastwards over the country on Friday night, and was followed by a new depression in the northwest on Saturday, causing a much-needed fall of rain on the afternoon of that day. In Dublin the mean height of the barometer was 30·190 inches, pressure ranging from 29·868 inches at 9 a.m. of Sunday (wind, N.) to 30·429 inches at 9 a.m. of Saturday (wind, W. by N.). The corrected mean temperature was 47·3°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 47·4°. The screened thermometers fell to 28·1° on Sunday and rose to 63·8° on Wednesday. Rain fell in measurable quantity on four days to the amount of ·163 inch, of which ·125 inch was collected on Saturday. The prevailing winds were—first, N.; afterwards S.W. and W. An aurora borealis appeared on Saturday night.

Changeable, rather cold, but not unfavourable weather held throughout the week ended Saturday, the 30th. The general tendency was for the advance over Northern and Western Europe of numerous depressions, of no great depth, from the northwestward. These systems kept the weather in an unsettled, rainy or showery state, while varying winds from Polar quarters (N.W. to E.) prevailed. The night temperatures were decidedly low, and notwithstanding many intervals of bright sunshine very little advance in temperature occurred even by day. The most striking feature of the week was a splendid display of aurora borealis on Monday night—it was seen from most parts of the British Isles. In central and eastern England heavy showers of hail and sleet, accompanied by thunder and lightning, fell on Monday, Tuesday, and Wednesday. In Dublin also hail fell on each of these days; there was a heavy downpour of rain on Sunday night, and a cold rain set in on Friday shortly after midnight, which fell in the form of snow on the mountains south of the city. In Dublin the mean height of the barometer was 30·014 inches, pressure varying between 30·411

inches at 9 a.m. of Sunday (wind, N.W.), and 29·655 inches at 9 a.m. of Wednesday (wind, W.N.W.). The corrected mean temperature was 45·6°, or 1·7° below that of the preceding week. The mean dry bulb readings at 9 a.m. and 9 p.m. were 45·4°. On Saturday the thermometers in the screen rose to 57·8°, having been down to 33·9° during the previous night. The rainfall was ·595 inch on four days. Of this quantity ·410 inch was entered to Sunday. The prevailing wind was northwesterly.

The rainfall in Dublin during the four months ending April 30th has amounted to 5·922 inches on 61 days, compared with only 3·203 inches on 46 days during the same period in 1891, 9·045 inches on 59 days in 1890, 8·345 inches on 74 days in 1889, 8·090 inches on 58 days in 1888, and a 25 years' average of 8·466 inches on 66·2 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall during April, 1892, amounted to only ·648 of an inch, distributed over 10 days; ·250 inch falling on the 24th. The total fall since January 1st, 1892, equals only 4·853 inches on 50 days.

MAY.—A generally favourable though changeable month. At first dry, cold, and bright; afterwards warm but unsettled, with frequent showers or even heavy rains, and strong southwesterly winds. After the 12th, rain fell almost daily. On the 28th there was an extraordinary downpour, lasting 6 hours, within which space of time 1·9 inches of rain fell in Dublin, or at the rate of 7·6 inches in 24 hours. The total rainfall of the 28th was 2·056 inches, or nearly one-half that of the whole month.

In Dublin the arithmetical mean temperature (53·8°) was decidedly above the average (52·0°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 52·9°. In the twenty-seven years ending with 1891, May was coldest in 1869 (M. T. =48·2°), in 1885 (M. T. = 48·7°), and in 1879 (the "cold year") (M. T. = 48·8°). It was warmest in 1868 (the "warm year") (M. T. = 55·8°) and 1875 (M. T. = 54·9°). In 1886, the M. T. was 50·5°, in 1887 it was 51·8°, in 1888 it was 52·5°, in 1889 it was 54·6°, in 1890 it was 53·2°, and in 1891 it was only 49·6°.

The mean height of the barometer was 29·944 inches, or 0·045 inch below the corrected average value for May—namely, 29·989 inches. The mercury rose to 30·381 inches at 9 a.m. of the 12th, and fell to 29·474 inches at 9 p.m. of the 28th. The observed range of atmospherical pressure was therefore, 0·907 inches—that is, a little more than nine-tenths of an inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 52·9°, or 7·6° above the value for April, 1892. Using the formula, *Mean Temp.* = *min.* + (*max.*—*min.* × ·47), the value was 53·3°, or 1·7° above the average mean temperature for May, calculated in the same way, in the twenty-five years, 1865–89, inclusive (51·6°). The arithmetical mean of the maximal and minimal readings was 53·8°, compared with a twenty-five years' average of 52·0°. On the 25th, the thermometer in the screen rose to 69·5°—wind W.S.W.; on the 5th the temperature fell to 37·9°—wind, N.E. The minimum on the grass was 31·5°, also on the 5th.

The rainfall amounted to 4·177 inches, distributed over 19 days. The average rainfall for May in the twenty-five years, 1865–89, inclusive, was 2·030 inches, and the average number of rainy days was 15·4. The rainfall and the rainy days, therefore, were much above the average. In 1886 the rainfall in May was very large—5·472 inches on 21 days; in 1869 also 5·414 inches fell on 19 days. On the other hand, in 1871, only ·378 of an inch was measured on 9 days; in 1876 only ·798 of an inch fell on 6 days; in 1887 only ·882 of an inch fell on 10 days; and in 1888 only ·978 of an inch on 11 days. In 1890, 2·438 inches fell on 17 days. In 1891 May was the first month in which the rainfall exceeded the average. It amounted to 2·792 inches on 17 days.

Solar halos were seen on the 17th, 24th, and 27th. High winds were noted on as many as 11 days, attaining the force of a gale, however, on only one occasion—namely, the 16th. Hail fell on the 16th. No thunder or lightning occurred in Dublin.

During the month the thermometer in the screen did not fall below 32°, but on four nights a temperature of 32° or less was recorded on the grass. The mean minimal temperature on the grass was 41·3°, compared with 37·7° in May, 1891, 42·2° in 1890, 42·4 in 1889, 37·5° in 1888, and 37·9° in 1887.

During the week ended Saturday, the 7th, while an abundant rainfall was experienced over the greater part of the British Islands between Monday and Wednesday, there was little spring growth owing to a persistence of northeasterly winds and low temperatures, both by day and by night. At the beginning and close of the week gradients for westerly (S. to W. and N.W.) winds existed and the weather was comparatively mild; but from Monday to Friday inclusive the highest atmospherical pressure was found to the N. and N.W., while a series of depressions alternately formed and dispersed along a trough of low pressure extending northeastwards from the Bay of Biscay to the Baltic. Hence, the cold northeast winds already referred to. On Sunday, the 1st, the weather was unsettled in Ireland and a heavy fall of rain occurred in the S. (0·95 inch at Roche's Point). On Monday night rain set in with N.E. winds in Dublin, 0·476 inch falling between 9 p.m. of this day and Wednesday morning. There was alternate cloud and sunshine from this time to the end of the week, but no rain fell in Dublin. The mean height of the barometer was 30·034 inches, pressure varying between 29·784 inches at 9 p.m. of Sunday (wind S.E.) and 30·253 inches at 9 a.m. of Friday (wind E.). The corrected mean temperature was 46·7°. On Saturday the screened thermometers rose to 58·7°, having fallen to 37·9° on Thursday. The mean dry bulb reading at 9 a.m. and 9 p.m. was 46·9°. Rain fell on two days to the total amount of ·476 inch, of which ·316 inch was measured on Monday. The prevailing wind was N.E. A sharp frost occurred on Friday night over S.E. England, the thermometer falling in the screen to 26° at Cambridge and to 29° even in London.

Taken as a whole, the weather of the week ended Saturday, the 14th, was favourable. Until

Thursday, it was settled and quiet—warm sunny days alternating with sharp, hazy nights. On Thursday the sky became overcast with cirro-stratus and cumulus in Ireland and the atmosphere grew close and oppressive. In the afternoon a copious fall of warm rain set in all over this country, literally changing the face of nature through the impetus it gave to vegetation. Friday was a breezy, dull, rainy day, while Saturday proved bright with fresh to strong westerly winds. The rainfall of Thursday and Friday was general throughout Ireland; in Scotland rain also fell generally but in smaller quantities; but in England the weather remained fair and dry until Friday, when the showers became tolerably general except in the extreme S.W. of that country. In Dublin the mean height of the barometer was 30·186 inches, pressure ranging between 30·381 inches at 9 a.m. of Thursday (wind, E.) and 30·002 inches at 9 p.m. of Saturday (wind, W.). The corrected mean temperature was 53·7°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was also 53·7°. The thermometer in the shade rose to 68·9° on Thursday and fell to 39·2° on Monday. The rainfall amounted to ·618 inch on three days, ·479 inch being entered to Thursday. An almost total eclipse of the moon (953 out of 1,000 parts being eclipsed) was well seen on Wednesday night. Easterly winds prevailed until Thursday. Then the winds became S.W. to W.

All through the week ended Saturday, the 21st, the weather—in Ireland especially—remained in a very changeable, showery, rough and cool condition. In the south of England it was finer and drier, while the northern part of that country and Scotland also experienced very variable weather. This state of things was brought about by the passage eastward across our northern districts of a succession of depressions, of no great depth indeed, whereas an area of high pressure hung over the Bay of Biscay and France. Hence strong, squally westerly (S.W. to N.W.) winds and frequent showers prevailed, Ireland coming in for the brunt of the bad weather as it swept in from the Atlantic. In Dublin rain was measured on six out of the seven days, and the showers were particularly heavy on Monday, Wednesday, and Thursday. A brief spell of fair weather set in on Friday afternoon, but the showers were renewed on Saturday afternoon after a very sharp night. The weather was highly favourable from an agricultural point of view. In Dublin the mean height of the barometer was 29·900 inches, pressure ranging between 29·644 inches at 9 a.m. of Monday (wind, W., blowing a moderate gale) and 30·080 inches at 9 p.m. of Friday (wind, W.N.W.). The corrected mean temperature was 52·9°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 52·3°. The screened thermometers rose to 61·8° on Wednesday and fell to 40·4° on Saturday. The rainfall was ·579 inch, of which ·228 inch fell on Thursday. Hail fell on Monday, when also there was a moderate westerly gale. The prevailing winds were westerly.

During the week ended Saturday, the 28th, except on Sunday and Monday, when the area of least atmospherical pressure was found over Sweden and the Baltic, the barometer was lowest over the Bay of Biscay, the British Islands, and the Atlantic Ocean. Hence gradients for southerly winds prevailed and the weather was kept in a changeable showery state, particularly in Ireland and Scotland. The southerly winds brought a great rise of temperature to France, Germany, and England, where the weather remained chiefly fine and dry until Wednesday, when a succession of thunderstorms began. On this day the thermometer rose to 90° in Paris and to 91° at Biarritz—the highest readings in England were 80° at Cambridge, 78° in London and at the North Foreland. On Friday 95° was reached in Berlin and 92° at Belfort, while 76° in London and at the North Foreland, and 75° at Cambridge were the highest British readings. Very severe thunderstorms passed over England during this period, and local heavy falls of rain and hail occurred. On Saturday there was an extraordinary downpour of rain in Dublin—1·902 inches falling in six hours between 9.15 a.m. and 3.15 p.m. The mean height of the barometer was 29·731 inches, pressure ranging from 29·902 inches, at 9 a.m. of Sunday (wind, S.E.) to 29·474 inches at 9 p.m. of Saturday (wind, variable). The corrected mean temperature was 57·3°, while the mean dry bulb reading at 9 a.m. and 9 p.m. was 56·8°. The thermometers in the screen fell to 46·0° on Sunday and rose to 69·5° on Wednesday. The wind was first southerly, then light easterly. The rainfall was 2·378 inches, on six days, 2·056 inches being registered on Saturday. No such daily measurement has been recorded in Dublin since October 27, 1880, when 2·736 inches of rain fell. The present is only the third occasion within the past twenty-seven years on which the rainfall exceeded 2 inches within 24 hours in Dublin.

The last three days of the month were changeable, with fresh or strong southerly to south-westerly winds, cloudy skies, and passing showers at times.

The rainfall in Dublin during the five months ending May 31st has amounted to 10·099 inches on 80 days, compared with only 5·995 inches on 63 days during the same period in 1891, 11·483 inches on 76 days in 1890, 10·476 inches on 91 days in 1889, 9·068 inches on 69 days in 1888, 6·489 inches on 62 days in 1887, and a 25 years' average of 10·496 inches on 81·6 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in May, 1892, was 4·695 inches, distributed over 17 days. Of this quantity 1·180 inches fell on the 12th, ·460 inch on the 24th, and 1·560 inches on the 28th. The total fall since January 1st, 1892, equals 9·548 inches on 67 days.

JUNE.—A changeable, but on the whole a favourable month. The weather was showery and cool at first—then came an anticyclonic period of beautiful, bright, warm weather, which was broken up by a thunderstorm on the 10th. At this time a remarkable "chill" passed southwards over Europe lasting more or less for a fortnight. The weather was very showery after the 15th. Severe thunderstorms occurred in England on the night of the 28th. More than one-third of the rainfall of the month fell on the morning of the 2nd—the measurement of Greystones, Co. Wicklow, being three times greater than that in Dublin.

In Dublin the arithmetical mean temperature (56·7°) was below the average (57·8°); by 1·1°; the mean dry bulb readings at 9 a.m. and 9 p.m. were 56·5°. In the twenty-seven years ending with 1891, June was coldest in 1882 (M. T.=55·8°), and in 1879 (the "cold year") (M. T.=55·9°).

It was warmest in 1887 (M. T.=62·3°), in 1865 (M. T.=61·0°), and in 1868 (the "warm year") (M. T.=60·5°). In 1886 the M. T. was 57·5°, in 1888 it was 56·2°, in 1889 it was 59·5°, and in 1890, it was 58·1°, and in 1891 it was 59·0°.

The mean height of the barometer was 29·979 inches, or 0·062 inch above the corrected average value for June—namely, 29·917 inches. The mercury rose to 30·362 inches at 9 a.m. of the 7th, and fell to 29·238 inches at 7.30 a.m. of the 2nd. The observed range of atmospherical pressure was, therefore 1·124 inches—that is, almost more than an inch and one-tenth.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 56·5°, or 3·6° above the value for May, 1892. Using the formula, *Mean Temp.*=*Min.*+(*max.*—*Min.* × ·465), the value was 56·1°, or 1·1° below the average mean temperature for June, calculated in the same way, in the twenty-five years, 1865–89, inclusive (57·2°). The arithmetical mean of the maximal and minimal readings was 56·7°, compared with a twenty-five years' average of 57·8°. On the 26th, the thermometer in the screen rose to 76·8°—wind, S.W.; on the 14th the temperature fell to 40·0°—wind, N.E. The minimum on the grass was 35·0°, also on the 14th.

The rainfall amounted to 1·671 inches, distributed over 17 days. The average rainfall for June in the twenty-five years, 1865–89, inclusive, was 1·817 inches, and the average number of rainy days was 13·8. The rainfall was, therefore, slightly below, while the rainy days were much above the average. In 1878 the rainfall in June was very large—5·058 inches on 19 days; in 1879 also 4·046 inches fell on 24 days. On the other hand, in 1889, only ·100 of an inch was measured on 6 days; in 1887, the rainfall was only ·252 of an inch, distributed over only 5 days; in 1874 only ·405 of an inch was measured on 9 days; and in 1868 only ·677 of an inch fell on but 6 days. In 1888 the rainfall was as much as 3·045 inches, distributed over as many as 18 days. In 1890 it was 1·930 inches on 18 days, and in 1891 it was 2·753 inches on 14 days.

High winds were noted on 8 days, but the force of a gale was not attained on any occasion. Temperature reached or exceeded 70° in the screen on 4 days, as compared with 17 days in 1887, only 1 day in 1888, 10 days in 1889, only 2 days in 1890, and 6 days in 1891. Thunder was heard on the 10th and 23rd, and hail fell on the 2nd and 22nd.

The weather remained in a changeable, showery, and squally condition throughout the period ending Saturday the 4th. Atmospherical pressure was lowest in the north-west, highest over France and Germany—hence a prevalence of gusty S. to W. winds in the British Islands. At exposed stations the force of the wind was considerable at times. On Wednesday, the 1st, hail fell at many British stations and thunder and lightning were prevalent. On Thursday afternoon heavy hail showers passed over Dublin, in the rear of a well-marked cyclonic system which had travelled in a north-north-easterly direction across Ireland during the previous night. This depression had caused a very heavy rainfall in most parts of this Island—·95 inch being recorded at Roche's Point in Cork, ·91 inch at Donaghadee in Down, and no less than 1·85 inches at Greystones, Co. Wicklow. Another depression travelled in the same direction across Ireland on Saturday, causing clouds and rain and finally a fresh S.W. wind.

The record of the week ending Saturday, the 11th, is in all respects favourable—hot sunshine and a forcing warmth having succeeded the clouds and frequent showers of the previous three weeks. At the beginning and close, no doubt, the distribution of atmospherical pressure over the British Islands was cyclonic, and the weather was showery and thundery—particularly in England. From Monday to Thursday inclusive, however, an anticyclone with moderate or slight barometric gradients lay over the British Islands, the North Sea, Holland, Belgium, and the northern half of France. During this period the sky was for the most part cloudless and the sun's rays were unusually powerful, so that on Thursday the shade thermometer rose to 83° at Leith and Loughborough, 82° at Cambridge, 79° at York and Liverpool, 78° at Nairn and Oxford, and 77° at Parsonstown. On Friday the maximum in London was 83° and at Cambridge 85°. The prevalence of local fogs kept temperature very low on the S.E. coast of England on Tuesday and Wednesday, and on Friday morning an excessive fall of the thermometer took place all over Scotland, where Thursday had been a very hot day. On Friday thunderstorms broke out in many parts of the country—between 1 and 2 p.m. thunder was frequently heard to the westward of Dublin, but the weather remained fair and bright in the city. On Saturday, however, heavy showers of rain fell. In Dublin the mean height of the Barometer was 30·094 inches, pressure ranging from 29·672 inches at 9 a.m. of Sunday (wind, W.N.W.) to 30·362 inches at 9 a.m. of Tuesday (wind, E.S.E.). The corrected mean temperature was 60·9°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 60·4. The highest shade temperature was 74·7° on Wednesday, the lowest was 51·0° on Saturday. Rain fell in measurable amount on one day (Saturday), the record being ·092 inch. The prevailing winds were E. and W.N.W. Thunder occurred on Friday.

The most striking feature of the weather of the week ended Saturday, the 18th, was the lowness of the temperature over North-western Europe. At the beginning, indeed, it was very hot in the South of France, but after a succession of thunderstorms the prevailing "chill" penetrated to that region also. The type of distribution of atmospherical pressure was mixed. Anticyclonic systems, or areas of comparatively high barometer, were found on most days off the western coasts of Ireland, while cyclonic systems, or areas of relatively low barometer, passed in a southerly or south-easterly direction across Great Britain and the North Sea. Hence the northerly winds and low temperatures of the period—also the showers which fell so frequently in most parts of the British Islands, especially on Sunday and after Wednesday. On the first-named day hail-showers fell over Scotland and the north-east of England. Up to Saturday the highest temperature recorded at any British station, reporting daily, was 67°, recorded at Leith on Wednesday. In Dublin the mean height of the barometer was 30·100 inches, pressure ranging from 30·239 inches at 9 p.m. of Monday (wind, N. by E.) to 29·956 inches, at 9 p.m. Saturday (wind, N.N.W.). The corrected mean temperature was 51·2°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 51·9°.

The shade thermometers rose to 61·5° on Thursday, having fallen to 40·0° on Tuesday. Rain fell in measurable quantity on three days, the total fall being ·075 inch, of which ·042 inch was recorded on Saturday. The prevailing winds were northerly. The mean temperature was 9·7° below that of the previous week.

The weather remained in a very changeable, cloudy, showery condition during the week ended Saturday, the 25th, but temperature showed a decided advance upon that of the previous week. At the beginning, no doubt, it was still very cold, the night minima being particularly low for the time of the year, but the last two days were genial and (as regards temperature only) summerlike. The type of distribution of atmospherical pressure was cyclonic throughout, and on Thursday and Friday a well-marked cyclone of considerable and increasing energy travelled up the English Channel and across the North Sea to Denmark causing very heavy rains in the S.E. of England. Near the centre of this system at 8 a.m. of Friday the barometer read as low as 29·17 inches (at Fanö, in Denmark). In and about Dublin more or less rain fell on every day of the week, but the total measurement was not large. Hail fell in places on Wednesday and Thursday, and shortly after midday on the latter day a sharp thunderstorm passed southeastwards to the eastward of the city. In Dublin the mean height of the barometer was 29·833 inches, pressure ranging from 29·919 inches at 9 a.m. of Friday (wind, S.W.) to 29·700 inches at 3 p.m. of Saturday (wind, W.S.W.) and 29·710 inches at 9 a.m. of Thursday (wind, N.N.W.). The corrected mean temperature was 55·2°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 56·1°. The screened thermometers fell to 45·4° on Sunday and Monday and rose to 67·2° on Saturday. Rain fell in measurable quantity on six days, the total amount being ·444 inch, of which ·180 inch was credited to Thursday. The prevailing winds were N.W. and S.W.

The closing period of the month (26th–30th) is notable chiefly for a thunderstorm depression which, in the interval between Tuesday morning (the 28th) and Thursday morning (the 30th), travelled in a north-easterly direction from the Bay of Biscay up the English Channel and across the North Sea to the South of Sweden. In its passage it caused thunderstorms of great intensity and heavy downpours of rain and hail over the greater part of England (the South-western counties, however, escaping) as well as in parts of France, Belgium, Holland, and Denmark. As much as 1·6 inches of rain were registered at Liverpool and York in this storm. In Dublin the sky on Tuesday, the 28th, was covered with a uniform sheet of cirro-stratus cloud, moving apparently from W. or S.W., while there was an easterly under-current, the wind becoming N.E. and N. at night. Rain fell from 3 p.m., but only to the amount of ·142 inch in the city. The heat was very great in Dublin on Sunday, the 26th, when the thermometer rose to 76·8° in the screen. A decided "chill" followed on Monday afternoon, and Tuesday was almost cold.

The rainfall in Dublin during the six months ending June 30th has amounted to 11·770 inches on 97 days, compared with 8·748 inches on 77 days during the same period in 1891, 13·413 inches on 94 days in 1890, 10·576 inches on 97 days in 1889, 12·113 inches on 87 days in 1888, 6·741 inches on 67 days in 1887, and a 25 years' average of 12·313 inches on 95·4 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in June, 1892, was 4·235 inches, distributed over 13 days. Of this quantity 1·850 inches fell on the 1st, ·780 inch on the 4th, and ·370 inch on the 28th. The total fall since January 1 has been 13·783 inches, on 80 days.

JULY.—A changeable, squally, showery but by no means wet month, of very low mean temperature and deficient rainfall, with a great preponderance of north-easterly and north-westerly winds.

In Dublin the arithmetical mean temperature (57·8°) was decidedly below the average (60·6°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 57·2°. In the twenty-seven years ending with 1891, July was coldest in 1879 (the "cold year") (M. T. = 57·2°). It was warmest in 1887 (M. T. = 63·7°), and in 1868 (the "warm year") (M. T.=63·5°). In 1886 the M. T. was 61·0°; in 1888 it was as low as 57·3°; in 1889 it was 58·7°; in 1890 it was 58·1°; and in 1891 it was 59·0°. From this, July, 1887, proves to have been the warmest since the present records commenced, whilst July, 1879, was the coldest. In only 2 years since 1864 was July colder than in the present year.

The mean height of the barometer was 30·019 inches, or 0·104 inch above the corrected average value for July—namely, 29·915 inches. The mercury marked 30·370 inches at 9 a.m. of the 24th, and fell to 29·420 inches at 4 30 p.m. of the 6th. The observed range of atmospherical pressure was, therefore, 0·950 inch—that is, a little less than an inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 57·2°, or 0·7° above the value for June, 1892. Using the formula, *Mean Temp. = min. + (max.—min. × ·465)*, the value was 57·3°, or 2·9° below the average mean temperature for July, calculated in the same way, in the twenty-five years, 1865–89, inclusive (60·2°). The arithmetical mean of the maximal and minimal readings was 57·8°, compared with a twenty-five years' average of 60·6°. On the 6th, the thermometer in the screen rose to 70·8°—wind, S.W.; on the 21st the temperature fell to 46·6°—wind, N.W. The minimum on the grass was 41·1° on the 10th.

The rainfall was 1·952 inches, distributed over 12 days. The average rainfall for July in the twenty-five years, 1865–89, inclusive, was 2·420 inches, and the average number of rainy days was 17·2. The rainfall, therefore, was considerably below the average, while the rainy days were also much below it. In 1880 the rainfall in July was very large—6·087 inches on 24 days; in 1871 also 4·391 inches fell on 28 days. On the other hand, in 1870, only ·539 of an inch was measured on 8 days; in 1869, the fall was only ·739 of an inch on 9 days, and in 1868, only ·741 of an inch fell on but 5 days.

High winds were noted on 10 days, and attained the force of a fresh or moderate gale on three occasions—viz., the 6th, the 9th, and the 19th. Temperature reached or exceeded 70° in the screen

on only 2 days. In July, 1887, temperature reached or exceeded 70° in the screen on no fewer than 17 days. In July, 1888, the maximum was only 68·7°. In July, 1891, maxima of 70° were reached only on 3 days. Distant thunder was heard on the 3rd. A fog occurred on the 30th.

The first two days of the month were warm but changeable.

Exceedingly unsettled, blustering, showery weather held throughout the week ended Saturday, the 9th. A succession of depressions of ever increasing intensity travelled north-eastwards along the Atlantic shores of the north-west of Europe. At first barometric gradients were not steep, so that the winds were not high, but very heavy showers, accompanied by thunder and lightning, were felt in most parts of the United Kingdom. This was particularly the case on Sunday. In Dublin, Monday and Tuesday proved fine, although the wind freshened considerably at times. Wednesday and Thursday were still more blustering, but only a few showers of rain fell in the city. At 8 a.m. of the latter day the barometer readings ranged from 30·13 inches over France and Germany to 28·96 inches in the Shetlands. Needless to say that a moderate or fresh W.S.W. gale was felt at many exposed stations in the British Islands. Friday was again showery and squally, but the evening turned out very fine. Splendid rainbows were seen between 5 20 and 8 p.m. On Saturday a new system of low pressure advanced across Ireland from S.W., resulting in a downpour of rain and fresh S.E. to S.W. winds, and finally a gale from N.W. In Dublin the mean height of the barometer was 29·769 inches, pressure oscillating between 29·420 inches at 4 30 p.m. of Wednesday (wind, W.S.W.), and 29·962 inches at 9 p.m. of Friday (wind, W.). The corrected mean temperature was 58·7°. The mean dry bulb temperature at 9 a.m and 9 p.m was only 56·7°. The screened thermometers rose to 70·8° on Wednesday, having fallen to 49·3° on Monday. The rainfall was ·782 inch on 6 days, ·280 inch being registered on Sunday and ·340 inch on Saturday. The mean direction of the wind was westerly. There were gales on Wednesday and Saturday. Thunder and lightning occurred at Bray on Sunday.

Cool, cloudy, changeable weather held during the greater part of the week ended Saturday, the 16th, Sunday being a notable exception, and proving a bright summer's day. The period was especially characterized by an unusual prevalence of easterly winds for July. These were, however, of cyclonic origin, so that the atmosphere was damp and the sky was heavily charged with clouds, which shut out the sunshine of midsummer to a great extent. During the week two main depressions passed across the British Islands in an east-north-easterly direction. In front of the first of these systems, calms and clear bright weather prevailed in Ireland on Sunday. In the afternoon there was remarkable visibility, the whole range of the Mourne Mountains being plainly, and that of the Welsh Mountains been dimly, seen from the slopes of the Dublin and Wicklow hills. In the interval between Monday and Thursday a depression passed across Ireland, England, and the North Sea to Denmark, causing easterly winds, clouds, and rain, with thunder in places. Then came another brief spell of fine, quiet weather, followed by a new depression and much rain on Friday night. Saturday was a dull, bleak day on the east coast of Ireland. In Dublin the mean height of the barometer was 29·851 inches, pressure varying between 30·084 inches at 9 a.m. of Sunday (wind, N.W.), and 29·605 inches at 9 p.m. of Tuesday (wind, N.E.). The corrected mean temperature was only 55·3°. The mean dry bulb readings at 9 a.m. and 9 p.m. were only 55·4°. The thermometers in the screen fell to 46·9° on Sunday, and rose to 62·7° on Monday. The rainfall was ·961 inch on three days, ·610 inch being referred to Friday. The prevailing winds were S.E. and N.E.

The weather during the week ended Saturday, the 23rd, although cloudy, dull, and cool for the most part, and at one time (on Tuesday) stormy, was much less unfavourable than in recent weeks. Towards the close an anticyclone became fairly established over the British Islands, and on Saturday after a dull morning a brilliant afternoon was enjoyed. During the first two days gradients for polar winds held throughout the N.W. of Europe, and on Sunday a heavy fall of rain took place over the greater part of England. The most striking feature in the meteorology of the week, however, was a cyclonic system which appeared off the N. of Scotland early on Tuesday morning and thence travelled rapidly down the east coast of Great Britain to Belgium, which it reached on Wednesday morning. This disturbance caused heavy rains in Great Britain and fresh to strong N.W. and N. gales in nearly all parts of the United Kingdom. Comparatively little rain fell in Ireland, while the depression was passing, but the storm was severe on exposed parts of the Irish coasts. An anticyclone spread in from the Atlantic on Thursday and held to the end of the week. It was accompanied by light variable, chiefly northerly, winds and calms. At first the sky was densely clouded; but bright sunshine set in on Saturday afternoon. In Dublin the mean height of the barometer was 30·150 inches, pressure ranging from 29·773 inches about 2 p.m. of Tuesday (wind, N.W.), to 30·348 inches at 9 p.m. of Saturday (wind, calm). The corrected mean temperature was 56·3°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 56·4°. On Friday the thermometers in the screen rose to 64·0°; on Thursday they fell to 46·6°. The rainfall amounted to ·106 inch, of which ·101 inch was referred to Monday, the only "rainy day." The prevailing winds were northerly (N.W. to N.E.). Temperature rose considerably during the daytime in England on Friday.

Very uneventful did the weather of the week ended Saturday, the 30th, prove in Ireland. The anticyclone, which had spread in from the Atlantic on Thursday, the 21st, held throughout the period now under review. Hence, fine, quiet weather prevailed in all districts for the most part. The atmosphere, however, was extremely hazy, and the amount of cloud was particularly great, more especially on the eastern seaboard of both Great Britain and Ireland. The anticyclone was of medium intensity—the highest pressure just exceeding 30·4 inches near the centre on Sunday morning (30·41 inches at Leith). Towards the close of the week, the area of highest pressure was found off the West of Ireland. It is interesting to observe that a shallow area of low pressure lay over the North of Spain, the South and West of France, and the Bay of Biscay during the whole week. This "thunderstorm depression" produced thunderstorms almost daily in the districts named—a heavy fall of rain (·64 inch) accompanying a storm in Jersey early on Friday morning

At this time the electrical disturbances reached as far north as Prawle Point, in Devonshire. In Dublin, the wind was nearly always E., or N.E., or N.; the sky was densely clouded in the mornings. while the afternoons often proved sunny. Temperature was low, but uniform. The mean height of the barometer was 30·291 inches, pressure ranging only from 30·370 inches at 9 a.m. of Sunday (wind, N.N.E.) to 30·203 inches at 9 p.m. of Saturday (wind, N.N.W.). The corrected mean temperature was 56·8°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 57·5°. The screened thermometers rose to 65·7° on Saturday and fell to 47·9° on Friday. There was no rainfall until the early morning of Sunday, July 31st, when ·010 inch fell in a shower. The prevailing wind was northeasterly.

Sunday, the 31st, was rather squally and cloudy, but otherwise very fine, although slight showers fell in the early morning.

The rainfall in Dublin during the seven months ending July 31st has amounted to 13·722 inches on 109 days compared with 10·935 inches on 92 days during the same period in 1891, 15·587 inches on 118 days in 1890, 13·146 inches on 112 days in 1889, 15·994 inches on 109 days in 1888, 7·935 inches on 80 days in 1887, and a 25 years' average of 14·733 inches on 112·6 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in July was 2·925 inches on only 10 days, compared with 1·325 inches on 18 days in 1891, and 1·489 inches, distributed over 18 days in 1890. Of this quantity ·580 inch fell on the 9th, ·730 inch on the 12th, and 1·150 inches on the 15th. The total fall since January 1 has been 16·708 inches on 90 days.

August.—Although changeable and forming no exception to the rule that August is characterised by heavy rains, this month was much less unfavourable than it had proved in each of the three preceding years. While no excessively high thermometer readings were noted in Ireland, the mean temperature was fully up to the average—in Dublin it was slightly in excess. The rains also, if heavy, were never continuous, and fine, bright intervals were often enjoyed. From a medical point of view it was a healthy month, diarrhœal diseases being held in check by the fresh high winds and abundant rainfall.

In Dublin the arithmetical mean temperature (60·0°) was slightly above the average (59·7°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 59·0°. In the twenty-seven years ending with 1891, August was coldest in 1881 (M. T.=57·0°), and warmest in 1871 (M. T.=62·0°). In 1885, the M. T. was only 57·1°; in 1879 (the "cold year"), it was 57·7°; in 1887 it was 60·3°; in 1888 it was 58·2°; in 1889, 58·6°, and in 1890, only 57·2°, and in 1891, 58·1°.

The mean height of the barometer was 29·852 inches, or 0·045 inch below the corrected average value for August—namely, 29·897 inches. The mercury marked 30·230 inches at 9 a.m. of the 10th, and fell to 29·140 inches at noon of the 30th. The observed range of atmospherical pressure was, therefore, 1·090 inches—that is, a little less than an inch and one-tenth.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 59·0°, or 1·4° above the value in August, 1888 and 1889, 2·7° above the value in August, 1890, and 1·8° above it in 1891. It was also 1·8° above the value for July, 1892. Using the formula, *Mean Temp.* = *min.* + (*max.*—*min.* × ·47), the value was 59·6°, or 0·3° above the average mean temperature for August, calculated in the same way, in the twenty-five years, 1865–89, inclusive (59·3°). The arithmetical mean of the maximal and minimal readings was 60·0°, compared with a twenty-five years' average of 59·7°. On the 11th and 13th, the thermometer in the screen rose to 70·0°—wind, W.S.W. on both occasions; on the 10th the temperature fell to 43·0°—wind, calm. The minimum on the grass was 40·9° on the same date.

The rainfall was 3·557 inches, distributed over as many as 22 days. The average rainfall for August in the twenty-five years, 1865–89, inclusive, was 2·825 inches, and the average number of rainy days was 15·5. The rainfall, therefore, and the rainy days were considerably in excess of the average. In 1874, the rainfall in August was very large—4·946 inches on 18 days; and in 1868 also 4·745 inches fell on, however, only 13 days; but the heaviest downpour in August occurred in 1889, when 5·747 inches were registered on 22 days. On the other hand, in 1884, only ·777 inch was measured on 8 days. In 1887, 1·520 inches of rain fell on 16 days, in 1888, 1·270 inches on 12 days, and in 1890, 2·799 inches on 19 days, and in 1891, 4·953 inches on 25 days.

High winds were noted on as many as 12 days, and attained the force of a gale on two occasions —namely, the 1st and 14th. A thunderstorm occurred on the 18th. Thunder was heard on the 13th. Lightning was seen on the 22nd and 23rd. Temperature reached 70° in the screen on two days. Solar halos were seen on the 10th, 17th, and 19th. It was foggy on the 22nd. A shock of earthquake was felt in the Counties of Dublin, Kildare, Wicklow, and Wexford, in the early morning of the 18th.

The record of the weather of the period ended Saturday, the 6th, is distinctly favourable. There was an advance in temperature, and the amount of bright sunshine was again considerable. Until Friday, the 5th, an anticyclone extended over Ireland from the Atlantic, while depressions of no great depth passed in succession southeastwards across Scandinavia and the North Sea. Hence northwesterly winds prevailed, sometimes blowing very freshly, and clouds and showers were reported from exposed stations from time to time. On Friday a broad band of high pressure stretched eastward across France and the South of England, while a depression of some intensity crossed the North of Scotland in an easterly direction. Under the influence of this system, the wind backed temporarily to S.W. in Ireland, and heavy showers fell in places. On Saturday, the weather was again fine and dry, with fresh W. and W.N.W. winds. In Dublin the barometer ranged between 30·227 inches at 9 p.m. of Monday (wind N.N.W.) and 29·894 inches at 9 p.m. of Friday (wind W.S.W.). The screened thermometers rose to 67·9° on Wednesday and fell to 53·0° on Thursday, and to 53·1° on Saturday. Rainfall amounted to ·151 inch on four days, ·061 inch being measured on Saturday. The prevailing winds were N.W. and W.

During the week ended Saturday, the 13th, the weather was changeable, with some heavy falls of rain at the beginning and close, and a considerable range of temperature. As regards distribution of atmospherical pressure, it may be described as being of a mixed type—at first it was cyclonic, then it became anticyclonic, and finally it reverted to the cyclonic form. During Sunday and Monday a shallow depression was passing in an easterly direction across the British Islands. This system showed no steep baric gradients, and was remarkable rather for the heavy rains which attended its passage than for any high winds. In two days, 1·63 inches of rain fell at Valentia in Kerry; 2·00 inches at Holyhead; 1·38 inches at Parsonstown; and 1·34 inches at Donaghadee. When this system moved away eastwards, northerly winds set in, the sky cleared, and radiation became so great that night minima between 36° and 40° were reported from most parts of the British Islands. On Thursday an anticyclone, which had come in from the Atlantic on Tuesday, moved southeastwards to the Continent, and a new series of depressions appeared in the extreme North-West. These brought fresh S.W. winds and rain or showers on Friday and Saturday, but the broken weather was compensated for by pleasantly high temperatures. In Dublin the mean height of the barometer was 29·926 inches, pressure ranging between 30·230 inches at 9 a.m. of Wednesday (wind calm), and 29·509 inches at 5 p.m. of Saturday (wind S.W.). The corrected mean temperature was 58·8°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 58·9°. The screened thermometers rose to 70·0° on Thursday and Saturday, having fallen to 43·0° on Wednesday. The rainfall was ·859 inch on five days, ·680 inch being measured on Sunday. The most prevalent wind was S.W. Thunder was heard on Saturday afternoon, when thunderstorms with heavy rain prevailed in the County Wicklow. Brilliant aurora was seen in many parts of North-Western Europe on Friday night.

The week ended Saturday, the 20th, is remarkable for the prevalence of torrid heat on the Continent, the occurrence of an earthquake in the S.W. of England, the S. of Wales, and the S.E. of Ireland early on Thursday morning, and the prevalence of very heavy thunder-rains—at first in Ireland, afterwards in England and over France. On Sunday more than an inch of rain fell at Parsonstown and Donaghadee, and three-quarters of an inch at Roche's Point. A second rainstorm occurred on Tuesday, when 0·95 inch was measured at Roche's Point and 1·31 inches in Dublin. Wednesday was a fine day, but a solar halo appeared in the afternoon. At 12.3 a.m. of Thursday (by Irish time) an earthquake was felt in the Counties of Dublin, Kildare, Wicklow, and Wexford, as well as in South Wales, Devonshire, and Cornwall. Later in the day there was a heavy rainfall in Dublin, accompanied by thunder and lightning. Friday proved beautifully fine in Ireland, but severe thunderstorms were felt over the greater part of Southern England, the attendant rainfall exceeding an inch in many places—1·3 inches at Cambridge, 1·36 inches in Jersey. But the most remarkable feature of the period was the excessive heat on the Continent. On Tuesday, the thermometer rose to 108° at Biarritz. Next day the maximum at that station was 104°, while it was 98° at Lyons, 97° at Wiesbaden, 95° at Berlin, and 93° in Paris. On Thursday the thermometer touched 95° in Paris, 96° at Brussels, and 97° at Lyons. The highest reading in the British Islands during this heated period was 83° at Cambridge on Wednesday. In Dublin the mean height of the barometer was 29·813 inches, and pressure varied from 29·271 inches at 9 p.m. of Sunday (wind S.W.) to 29·987 inches at 9 a.m. of Tuesday (wind S.). The corrected mean temperature was 59·3°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 58·6°. The screened thermometers rose to 68·8° and also fell to 50·1° on Saturday. The rainfall measured 1·828 inches, of which 1·310 inches fell on Tuesday. The rainy days were five. The prevailing wind was S.W.

Although changeable, the weather of the week ended Saturday, the 27th, was by no means unfavourable in Dublin. Over the south and west of Ireland, however, extremely heavy rains fell between Sunday evening and Wednesday morning—at Roche's Point, Co. Cork, the measurement was no less than 4·35 inches, 2·75 inches falling in the 24 hours ending 8 a.m. of Wednesday. This downpour was, as usual, connected with the formation of shallow atmospherical depressions moving but slowly, with hot southerly winds to the eastward and cool northerly winds on their western side. One of these depressions formed over the South of England on Tuesday, causing severe thunderstorms but no excessive rains in that district. These disturbances followed upon a day of great heat, the shade thermometer having risen on Tuesday to 77° at Oxford, 78° at York, 80° in London, and 82° at Loughborough and Cambridge. On Friday and Saturday a general and very decided reduction of pressure took place in the North, so that fresh westerly winds were felt and heavy showers fell in places, Dublin again almost entirely escaping the bad weather. In Dublin the mean height of the barometer was 29·829 inches, pressure ranging from 30·036 inches at 9 p.m. of Sunday (wind, S.S.W.), to 29·568 inches at 5·45 p.m. of Saturday (wind, W.). The corrected mean temperature was 60·9°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 60·3°. The shade thermometers rose to 69·9° on Sunday and fell to 49·8° on Thursday. The rainfall was ·137 inch, on four days, ·061 inch being measured on Tuesday. The prevailing winds were at first S., afterwards W. Lightning was seen on the nights of Monday and Tuesday.

During the last four days of the month the weather remained in an unsettled, rainy condition, owing to the passage in a north-easterly direction of a deep depression across the British Islands. Large quantities of rain fell, and the winds were at times very high. In Dublin the barometer sank to 29·140 inches at noon of the 30th. This illustrates the statement made last year that deep cyclonic systems sweep almost periodically across North-Western Europe during the last week of August.

The rainfall in Dublin during the eight months ending August 31st has amounted to 17·279 inches on 131 days compared with 9·455 inches on 96 days during the same period in 1887, 17·264 inches on 121 days in 1888, 18·893 inches on 134 days in 1889, 18·386 inches on 137 days in 1890, 15·888 inches on 117 days in 1891, and a 25 years' average of 17·558 inches on 128·1 days

At Knockdolian, Greystones, Co. Wicklow, the rainfall in August, 1892, was 4·588 inches, distributed over 18 days. Of this quantity ·710 inch fell on the 16th. The total fall from January 1 to the end of August 21·296 inches on 108 days.

SEPTEMBER.—This month was changeable throughout. High winds from westerly points prevailed, showers fell frequently, and at times the weather was decidedly cold for the time of year. This was particularly the case during the last four days of the month. The maximal temperature was only 65·6°, or exactly 10° below the corresponding value in September, 1891, on the 10th of which month the thermometer rose to 75·6° in the shade. The mean temperature was 3·1° below that of September, 1891.

In Dublin the arithmetical mean temperature (54·5°) was decidedly below the average (55·8°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 53·6°. In the twenty-seven years ending with 1891, September was coldest in 1886 and in 1882 (M. T.=53·0°), and warmest in 1865 (M. T.=61·4°). In 1880, the M. T. was as high as 58·6°; in the year 1879 (the "cold year"), it was 54·3°; in 1887 it was 54·0 ; in 1888, it was 54·4°; in 1889, it was 55·8°, or exactly the average; and in 1890, it was as high as 59·6°, and in 1891, it was 57·6°. So warm a September as that of 1890 had not occurred for a quarter of a century.

The mean height of the barometer was 29·904 inches, or 0·006 inch below the corrected average value for September—namely, 29·910 inches. The mercury rose to 30·318 inches at 9 p.m. of the 4th, and fell to 29·369 inches at 9 a.m. of the 30th. The observed range of atmospherical pressure was, therefore, ·949 of an inch—that is, a little less than one inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 53·6°, or as much as 5·4° below the value for August, 1892. Using the formula, *Mean Temp.* $=min. + (max. - min. \times \cdot 476)$, the mean temperature was 54·2°, or 1·3° below the average mean temperature for September, calculated in the same way, in the twenty-five years, 1865–89, inclusive (55·5°). The arithmetical mean of the maximal and minimal readings was 54·5°, compared with a twenty-five years' average of 55·8°. On 12th, the thermometer in the screen rose to 65·6°—wind, S.S.W.; on 17th the temperature fell to 40·8°—wind, W.S.W. The minimum on the grass was 35·1° also on 17th.

The rainfall was 2·631 inches, distributed over 19 days—both the rainfall and the rainy days were considerably above the average. The average rainfall for September in the twenty-five years, 1865–89, inclusive, was 2·176 inches, and the average number of rainy days was 14·7. In 1871, the rainfall in September was very large—4·048 inches on, however, only 13 days. On the other hand, in 1865, only ·056 inch was measured on but 3 days. In 1888, the rainfall was only ·728 inch on 10 days; in 1889, 1·043 inches fell on 13 days; in 1890, 2·469 inches fell on 14 days; and in 1891, 2·132 inches on 18 days.

High winds were noted on as many as 17 days, but attained the force of a gale on only two occasions—the 15th and 27th. A solar halo appeared on the 1st, lunar halos on the nights of the 6th and 7th. Lightning was seen on the 2nd. Hail fell on the 2nd.

During the first three days the arrival of a series of depressions, secondary to a large area of low barometrical pressure in the far North, kept the weather in a changeable, showery, squally condition, the showers being sometimes locally accompanied by thunder and lightning. On Friday, the 2nd, violent hail-storms swept over Dublin at 2 p.m. and 4 p.m., yielding ·270 inch of rain, while summer lightning was seen at night. As the period drew to a close the air became colder and drier. The rainfall of these three days amounted to ·708 inch.

Although changeable and showery, the weather of the week ended Saturday, the 10th, was by no means unfavourable—no deep depressions brought with them gales, nor were the rains heavy as a rule at the British stations. There was, however, a marked falling off in temperature, which generally ruled low for the time of year. Quantities of cold rain fell in Austria and Bavaria at the beginning of the period. Sunday was a very fine day in Ireland, over which an anticyclone advanced from the Atlantic, bringing with it northerly winds and a dry atmosphere. The succeeding night was clear and sharp, the shade thermometer falling to 45° in Dublin, 44° at Parsonstown, 40° at Nairn and Aberdeen, 39° in London and at Shields, and 38° at York. During the next few days, atmospherical pressure, while generally above the average, was very unstable, and shallow depressions formed here and there, causing rain or showers but no high winds. One of the most striking of those disturbances travelled northwestwards to the North Sea from Central Europe between Wednesday and Friday, causing cold wet weather on the Continent. The amount of cloud was considerable, but there were intervals of pleasant sunshine. In Dublin the mean height of the barometer was 30·119 inches, pressure ranging between 30·318 inches at 9 p.m. of Sunday (wind, N.W.), and 29·977 inches at 9 p.m. of Friday (wind, W.). The corrected mean temperature was 54·9°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 54·6°. On Monday the screened thermometers rose to 63·7°; on Thursday they fell to 44·9°. The rainfall was ·491 on six rainy days—·118 inch was measured on Monday and ·200 inch on Saturday. The prevailing winds were S. W. to N.W. Lunar halos were seen on the evenings of Tuesday and Wednesday.

The weather of the week ended Saturday, 17th, although changeable, and at times distinctly autumnal in character, was by no means unfavourable. A marked tendency to the formation of an anticyclone was observed over Central Europe and the South of England from time to time. In Ireland and Scotland as well as in Norway, on the other hand, the type of atmospherical pressure was entirely cyclonic, and at one time—on Friday morning—the barometer fell almost to 29 inches in the Hebrides. Accordingly, while dry and tolerably warm weather was enjoyed in England and on the Continent, a good deal of rain fell in Ireland and Scotland, where also the winds were strong and variable in direction. Sunday was very unsettled, and a considerable fall of rain occurred in the afternoon. The three following days were chiefly fine in Dublin, but on Thursday afternoon the wind blew a moderate gale from S.S.W. and S., and at night there was a sharp rainfall. Friday and Saturday were, on the whole, fine days but temperature was low—on Friday night the grass minimum was 35·1° even in the city. In Dublin the mean height of the barometer was 29·901 inches, pressure ranging between 29·549 inches at 9 p.m. of Thursday (wind S.S.W.)

and 30·187 inches at 9 a.m. of Saturday (wind, W.S.W.). The corrected mean temperature was 55·2°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 54·9°. On Monday the thermometers in the shade rose to 65·6°, on Saturday they fell to 40·8°. The rainfall was ·333 inch on three days, ·247 inch being measured on Sunday. The prevalent winds were S.S.W. and W.

Except on Tuesday, which was very wet and inclement, the weather of the week ended Saturday the 24th, while changeable, was by no means unfavourable in Dublin, or indeed throughout Ireland. The most striking feature of the period under review was the abrupt change in the distribution of atmospherical pressure which took place in the course of Monday night, and which substituted N.E. for S.W. winds, the shift of wind being accompanied by gloom, heavy falls of rain in Ireland and England, and much thunder, lightning, and hail in the latter country. On Sunday pressure was low in the North, high over Germany, whence an anticyclone spread westwards across the south of England. Strong S.W. winds prevailed, and the weather was showery or rainy in Ireland and Scotland. During Monday gradients for S.W. winds rapidly died out, so that on Tuesday morning the barometer was highest over Scotland, while shallow areas of low pressure were found off the south of Ireland and over the English Channel. Heavy rains fell in Ireland, thunderstorms occurred in England, while temperature fell so fast under a clear sky and with a calm atmosphere in Scotland that the thermometer fell to 25° at Nairn, 32° at Aberdeen, and 34° at Stornoway and Wick—this too at a time when the night minimum was 60° at Dungeness and Hurst Castle. A complex low pressure area lay for the next two days over the English Channel and Belgium, causing a continuance of dull, wet weather in England. On Friday gradients of S.W. and W. winds were re-established in Ireland. In Dublin the mean height of the barometer was 30·030 inches, pressure ranging from 29·838 inches at 9 p.m. of Sunday (wind S.S.W.), to 30·285 inches at 9 a.m. of Thursday (wind, E.N.E.). The corrected mean temperature was 54·5°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 54·1°. The screened thermometers rose to 63·7° on Monday and fell to 45·1° on Thursday. The rainfall amounted to ·699 inch on four days, ·521 inch being measured on Tuesday. The prevailing winds were S.W. and N.E.

The closing period (25th-30th) was very cold and changeable, with fresh to squally westerly and north-westerly winds and showers. All through the barometer was low in the far north, high over central Europe. At times shallow depressions formed as subsidiaries to the main area of low pressure in the north; and, as these swept eastward across the British Islands, squalls and cold showers of rain and hail were prevalent. Very heavy rains fell over the South of England on Thursday the 29th. In Dublin the first two days of the period were fine and breezy. Early on Tuesday, the 27th, rain fell, accompanied by a moderate gale from S.W. In the course of this day the wind veered to W.N.W., and temperature fell fast, never recovering up to the close of the month. On Sunday, the 25th, the thermometer in the screen rose to 63·5°; on Friday, the 30th, it fell to 42·7°. The rainfall was ·400 inch on four days.

The rainfall in Dublin during the nine months ending September 30th has amounted to 19·910 inches on 150 days, compared with 10·968 inches on 112 days during the same period in 1887, 17·992 inches on 131 days in 1888, 19·936 inches on 147 days in 1889, 20·855 inches on 151 days in 1890, 18·020 inches on 135 in 1891, and a 25 years' average of 19·734 inches on 142·8 days.

At Knockdolian, Greystones, County Wicklow, the rainfall in September, 1892, was 2·587 inches, distributed over 17 days. Of this quantity ·750 inch fell on the 20th, and ·330 inch on the 10th.

On the morning of the 22nd an extraordinary migration southwards of swallows was witnessed along the coast at Greystones.

October.—October, 1892, proved to be the coldest October recorded in Dublin within at least twenty-eight years. The month was characterised by an overwhelming prevalence of northerly (N.W. to N.E.) winds in Ireland, and by an excessive rainfall in England—particularly in the N.E., E.S.E. and S. districts of that country. In London the rainfall was 4·07 inches, at Yarmouth it was 8·63 inches. At Parsonstown, on the other hand, it was only 2·05 inches. Only during a short interval between the 26th and the 29th were the polar winds replaced by a strong southerly current and high temperatures in Ireland. So sudden was the upward movement of the thermometer at the time mentioned, that temperature stood 30° or upwards higher on the 27th than it had been on the 26th, and in Dublin the air temperature on the 27th was 14° above that of the water in the Vartry mains (58° compared with 44°).

In Dublin the arithmetical mean temperature (44·8°) was much below the average (49·7°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 43·9°. In the twenty-seven years ending with 1891, October was coldest in 1880 (M. T. = 45·4°), and in 1885 (M. T. = 45·5°), and warmest in 1876 (M. T. = 53·1°). In 1886, the M. T. was as high as 52·0°; in 1879 (the "cold year"), it was 49·7°. In 1887, it was as low as 47·3°; in 1888, it was 49·1°; in 1889, it was only 48·1°; in 1890 it was 51·7°, and in 1891, it was 49·5°. October, 1892, has thus beaten the record for coldness.

The mean height of the barometer was 29·759 inches, or 0·081 inch below the corrected average value for October—namely, 29·840 inches. The mercury rose to 30·422 inches at 9 p.m. of the 18th, and fell to 28·883 inches at 7 a.m. of the 29th. The observed range of atmospherical pressure was, therefore, as much as 1·539 inches—that is, a little more than an inch and a half.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 43·9°, or 9·7° below the value for September, and 15·1° below that for August, 1892. The arithmetical mean of the maximal and minimal readings was 44·8°, compared with a twenty-five years' average of 49·7°. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·486), the value was 44·6°, or as much as 4·9° below the average mean temperature for October, calculated in the same way, in the twenty-five years, 1865-89, inclusive, (49·5°). On the 28th, the thermometer in the screen rose to 58·2°—wind, S.S.W.; on the 26th the temperature fell to 28·3°—wind, calm. The minimum on the grass was 23·8°, also on the 26th—on four nights the thermometer sank to or below 32° in the screen, and on thirteen nights frost occurred on the grass.

The rainfall was 2·535 inches, distributed over 17 days—the rainfall was considerably, while the rainy days were slightly, below the average. The average rainfall for October in the twenty-five years, 1865–89, inclusive, was 3·106 inches, and the average number of rainy days was 17·6. In 1880 the rainfall in October was very large—7·358 inches on 15 days. In 1875, also, 7·049 inches fell on 26 days. On the other hand, in 1890 only ·639 inch fell on but 11 days, in 1884 only ·834 inch was measured on but 14 days, and in 1868 only ·856 inch on 15 days. In 1888, the rainfall was 1·227 inches on 16 days, and in 1889 no less than 4·853 inches fell on 22 days. In 1891, 3·590 inches fell on 13 days. From these figures, it will be seen that October, 1890, proved the driest on record for more than a quarter of a century at least.

A lunar halo was seen on the 8th. High winds were noted on 8 days, and attained the force of a gale on four occasions—the 9th, 14th 26th, and 27th. The atmosphere was more or less foggy in Dublin on the 11th, 18th, 24th, 25th, and 26th. Lightning was seen on the evening of the 21st, and thunder and lightning occurred on the afternoon of the 2nd. Hail fell on the 1st, 2nd, 14th, 16th, 21st, 22nd, and 25th.

On Saturday, the 1st, hail fell, and the cold became severe for the season.

Cold, inclement rainy weather was experienced in all parts of the British Islands as well as in many parts of the Continent throughout the week ended Saturday, the 8th. The centres of complex and rather deep atmospherical depressions were found over Great Britain and the North Sea. These moved slowly—for the most part in a northerly direction—and as they passed, large quantities of cold rain and hail fell, while thunder and lightning occurred from time to time. As Ireland lay to the westward of the central areas of low pressure, N.W. and N. winds were prevalent in this country, and temperature was particularly low for the time of year. On Sunday, the 2nd, thunder and lightning occurred in many places—in Dublin a vivid flash of lightning and a loud peal of thunder were followed by a heavy shower of rain and hail at 4.45 p.m. Monday was fair to cloudy, but rain fell heavily at night. The next two days were cold but fine in Dublin, but in the 24 hours ending 8 a.m. of Wednesday 2·6 inches of rain were measured at Lynsted, in North Kent; 1·6 inches at Yarmouth; and 1·5 inches at Dungeness. At 6 p.m. of Wednesday the barometer read only 28·88 inches at Nairn in Scotland. In Dublin the mean atmospherical pressure was 29·539 inches. The barometer rose to 29·797 inches at 9 a.m. of Monday (wind, W.N.W.), and fell to 29·317 inches at 4 p.m. of Wednesday (wind, W.). The corrected mean temperature was 46·7°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 46·2°. The shade thermometers rose to 54·7° on Monday and fell to 39·0° on Saturday. The rainfall amounted to ·396 inch on 5 rainy days. On Monday the measurement was ·161 inch. Thunder, lightning, and hail occurred on Sunday. The prevailing wind was northwesterly. At Yarmouth 3·88 inches of rain fell in the seven days ending 8 a.m. of Saturday.

Both at the beginning and at the close of the week ended Saturday, the 15th, the weather was broken and rough; in the middle of the week it was quiet and fine, although very cold for the time of year. On Sunday, the 9th, the centre of a deep depression, in which the barometer was below 28·9 inches (28·84 inches at Wick and Nairn at 8 a.m.) lay over Scotland. Baric gradients for N. to N.W. winds were very steep over Ireland, where, in consequence, a fresh to strong gale from the points named prevailed. Scarcely any rain fell in Dublin in connection with this gale. During the next two days the disturbance travelled slowly eastwards, and became shallower. In its rere, an area of high atmospherical pressure spread in from the Atlantic, so that on Wednesday evening the isobar of 30·2 inches embraced the whole of Ireland. At this time a new system of broken weather was developing over France, where heavy rains fell in connection with a low pressure system of ever-increasing intensity. By 8 a.m. of Friday the centre of this cyclone had reached the Channel Islands by an erratic course, and north-easterly gales and heavy rains set in on the east coast of Ireland as well as in many parts of England. In consequence both Friday and Saturday turned out dull and wet, while temperature rose several degrees. At York 1·73 inches of rain fell in the 24 hours ending 8 a.m. of Saturday. In Dublin the mean height of the barometer was 29·943 inches—pressure ranging from 29·344 inches at 7.30 a.m. of Sunday (wind, W.N.W.), to 30·218 inches at 9 p.m. of Wednesday (wind, N.W.). The corrected mean temperature was 46·2°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 45·8°. On Saturday the shade thermometers rose to 52·4°; on Wednesday they fell to 38·1°. The rainfall was 1·249 inches on three days, ·784 inch being measured on Friday and ·360 inch on Saturday. The prevailing winds were W.N.W. and N.E.

The chief feature in the weather of the week ended Saturday, the 22nd, was the extraordinary intensity of the cold, considering the time of year—on every night the thermometer in the screen fell below 42°, and the grass minimum was below 32° on five nights; on the other hand, only once (on Thursday) did the thermometer in the screen rise above 50° (to 51·7°). At the beginning, the depression which had caused such bad weather during the previous three days had returned to its original situation over the W. of France and the Bay of Biscay, having all but completed a circle in the course of its erratic wanderings. Cold, but moderating N. and N.E. winds were prevalent in the British Islands, where showers of rain and hail fell at exposed stations. An anticyclone now spread in from the Atlantic, reaching its fullest development on Wednesday morning, when the barometer read 30·46 inches at Valentia Island in Kerry. Under the influence of this system temperature became very low at night, the thermometer falling on Tuesday night to 26° at Loughborough, 28° at Parsonstown and even Valentia, and 30° at York and Oxford. A new depression now began to form over the North Sea, and this caused a renewal of showers on Friday and Saturday, the precipitation taking the form of sleet and hail in many places. On Friday evening vivid lightning was seen over the Irish Sea. In Dublin the mean height of the barometer was 30·082 inches—pressure ranging from 30·422 inches at 9 p.m. of Tuesday (wind, N.W.) to 29·733 inches at 9 p.m. of Saturday (wind, also N.W.). The corrected mean temperature was only 42·0° or 7° below the average. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 41·0°. On Thursday the thermometers in the screen rose to 51·7°, having fallen to 32·0° on the

previous day. The rainfall was ·194 inch on four days, ·112 inch being measured on Saturday. Hail fell on Sunday, Friday, and Saturday. Lightning was seen on Friday evening. The prevailing wind was N.W.

A very decided change in the weather occurred in the middle of the week ended Saturday, the 29th. Quite suddenly warmth, rain and high southerly winds took the place of the frosts, cold showers, and northerly winds of the earlier part of the week, conditions by which the advent of mid-winter seemed to have been anticipated. On Sunday a large area of low pressure lay over the North Sea—frost prevailed in Ireland, while strong N.W. winds and gales were blowing in Great Britain, with showers of hail and sleet or snow at many British stations. Monday was a quiet winter's day. Early on Tuesday heavy rain fell in the S.W. of England in connection with a depression which advanced quickly over France in an easterly direction. On this day there were light showers of cold rain and hail in Dublin, but the weather was generally dry. At night intense frost for the time of year occurred in many places—the shade thermometer fell to 28° in Dublin and London, 27° at Shields, 26° at Cambridge and Leith, 25° at Oxford and York, 24° at Parsonstown, 22° at Loughborough, and 21° at Donaghadee. All was changed on Wednesday, when the first of a series of deep depressions edged in over Ireland from the S.W. Temperature rose so fast, that the maximum on Thursday was 30° or upwards above the minimum on Wednesday. A strong southerly gale blew on Wednesday night in the Irish Sea, and warm rains fell in abundance from time to time up to Saturday, when the wind veered to W. and temperature fell. In Dublin the mean height of the barometer was 29·527 inches, pressure ranging from 29·977 inches at 9 p.m. of Tuesday (wind N.W.) to 28·883 inches at 7 a.m. of Saturday (wind, S.E. light). The corrected mean temperature was 43·9°—that of the first four days being 38·0°, that of the last three days being 51·7°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 43·3°. On Wednesday the screened thermometers fell to 28·3°; on Friday they rose to 58·2°. The rainfall was ·634 inch on four days, ·276 inch being measured on Friday. The prevailing winds were—first, W.N.W., then S.S.W., and finally W.

The last two days were cool and fair in Ireland—unsettled with heavy rain in the S. and S.E. of England.

The rainfall in Dublin during the ten months ending October 31st has amounted to 22·445 inches on 167 days, compared with 12·366 inches on 123 days during the same period in 1887, 19·219 inches on 147 days in 1888, 24·789 inches on 169 days in 1889, 21·494 inches on 162 days in 1890, 21·610 inches on 148 days in 1891, and a 25 years' average of 22·840 inches on 160·4 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall amounted to 3·340 inches on 15 days. Of this quantity ·900 inch fell on the 26th, ·710 inch on the 14th, and ·650 inch on the 27th. The rainfall in October, 1890, was only ·600 inch, distributed over 13 days. Of this quantity ·160 inch fell on the 6th, and ·120 inch on the 14th. The rainfall at Greystones in October, 1889 was no less than 6·935 inches on 22 days, or more than 11 times as great as the fall in October 1890. In 1891, 5·122 inches fell on 14 days.

From January 1st, 1892, up to October 31st, rain fell at Knockdolian, Greystones, on 140 days, to the total amount of 27·223 inches.

NOVEMBER.—A dull, damp, open month, with a monopoly of winds from equatorial quarters (S.E., S., and S.W.), and scarcely any frost. The most remarkable feature in the weather was the advance in temperature as compared with the preceding October. The mean of the maximum and minimum readings of the thermometer was as much as 2·1° above that of October, and the mean dry bulb reading at 9 a.m. and 9 p.m. was 46·1°, compared with 43·9° in October—an advance of 2·2°.

In Dublin the arithmetical mean temperature (46·9°) was decidedly above the average (44·7°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 46·1°. In the twenty-seven years ending with 1891, November was coldest in 1878 (M. T. = 38·2°), and in 1870 (M. T. = 42·2°), and warmest in 1881 (M. T. = 50·3°). In 1886, the M. T. was as high as 46·4°; in the year 1879 (the "cold year") it was 43·9°; in 1887, it was as low as 42·6°; in 1888, it was as high as 47·5°; in 1889, it was 46·4°; in 1890, it was 45·3°; and in 1891, it was 43·4°.

The mean height of the barometer was 29·922 inches, or 0·062 inch above the corrected average value for November—namely, 29·860 inches. The mercury rose to 30·371 inches at 9 p.m. of the 27th, and fell to 29·264 inches at 9 p.m. of the 14th. The observed range of atmospherical pressure was, therefore, 1·107 inches—that is, slightly more than one inch and one-tenth.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 46·1°, or 2·2° *above* the value for October, but 7·5° below that for September, 1892. The arithmetical mean of the maximal and minimal readings was 46·9°, compared with a twenty-five years' average of 44·7°. On the 4th the thermometer in the screen rose to 56·8°—wind, S.S.W.; on the 1st the temperature fell to 31·0°—wind, calm. The minimum on the grass was 24·7°, also on the 1st.

The rainfall was 2·404 inches, distributed over 19 days—the rainfall was slightly below, while the rainy days were above the average. The average rainfall for November in the twenty-five years, 1865-89, inclusive, was 2·452 inches, and the average number of rainy days was 17·0. In 1876 the rainfall in November was large—3·614 inches on 20 days; in 1872, also, 3·414 inches fell on 24 days; in 1887, 3·012 inches fell on 18 days; in 1888, 6·549 inches fell on 26 days; in 1890, 4·212 inches fell on no less than 27 days; and in 1891, 2·911 inches fell on 15 days. On the other hand, the rainfall in 1889 was only ·929 inch on 9 days; in 1870, only 1·218 inches were measured on but 11 days, and in 1879, only 1·251 inches on but 10 days.

High winds were noted on 10 days, but attained the force of a gale on only one occasion—the 28th. The atmosphere was more or less foggy in Dublin on the 1st, 6th, 7th, 9th, 10th, 16th, 19th, and 24th.

A lunar halo was seen on the 5th, when also there was a lunar rainbow.

With the coming of November, the cold and rawness of October gave place to southerly winds, genial warmth, and very bright, sunny intervals. On Tuesday morning, the 1st, hoar frost and dense smoke fog prevailed for a time in Dublin, but later in the day southerly winds set in and temperature rose many degrees. Very open weather continued from this time to the end of the period. The days were fair and remarkably sunny, while warm rains usually fell at night. A lunar rainbow appeared at 5 45 p.m. of Saturday, and a lunar halo at 9 p.m. In Dublin the height of the barometer ranged from 29·869 inches at 9 a.m. of Tuesday (wind calm) to 29·377 inches at 7 a.m. of Thursday (wind, S.W.). On Tuesday the thermometer fell to 31·0° in the screen and to 24·7° on the grass. On Friday the maximum temperature in the screen was 56·8°. The rainfall was ·472 inch on five days, ·217 inch being measured on Thursday. The wind was southerly and southwesterly.

Changeable, but generally favourable, weather prevailed during the week ended Saturday, the 12th. Temperature was especially unstable, owing to the alternate prevalence of southerly wind and calm, of clouds and of clear sky. After Monday an anticyclone formed over France and Germany, so that a southerly or southwesterly current of air was determined over the British Isles. The first two days were quiet and very fine, although haze and fog hung over the City of Dublin from time to time—on Monday evening the fog was very dense. This was followed by a considerable fall of rain at night, after which the weather became fine and extremely mild. Rain fell at intervals, but not heavily, on Wednesday. At night the sky cleared and temperature gave way, so that vapour fog worked up from W. after 9 p.m. Two very pleasant mild days followed, but Saturday proved rather dull and showery and rain fell heavily in the evening. In Dublin the corrected mean temperature was 46·6°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 45·9°. On Wednesday the thermometer in the screen rose to 54·7°; on Monday they fell to 33·8°. The rainfall was ·407 inch on four days—·132 inch being measured on Monday and ·213 inch on Saturday. The prevailing winds were S.W. and S. The mean height of the barometer was 30·002 inches, pressure varying from 30·171 inches at 9 a.m. of Monday (wind, W.), to 29·705 inches at 9 p.m. of Saturday (wind, S.), when a V-shaped depression was passing over the country.

All through the week ended Saturday, the 19th, an anticyclone, or area of high atmospherical pressure, held over Central Russia, where the barometer ranged from 30·40 inches to 30·60 inches and upwards. At the same time pressure was about three quarters of an inch to an inch and three-tenths lower than those values over the Atlantic seaboard in the North-West. Hence a prevalence of southerly and southwesterly winds and open, but changeable, weather was reported from all parts of Europe. On Sunday a curious V-shaped depression lay over the Irish Sea, causing light N. winds and cool weather in Ireland, S. winds and warm weather in England. On Monday morning the barometer was down to 29·19 inches at Belmullet, and heavy rain prevailed over Ireland, accompanied by fresh to strong southerly winds. As this disturbance travelled away to the northward, the weather became fine and quiet in Ireland, while a depression advanced from S.S.W. over the S. and S.E. of England, where much rain fell on Tuesday and Wednesday (1·20 inches in London). On Friday an equally heavy downpour of rain occurred in Ireland, in connection with a new area of low pressure, which showed itself in the West on Thursday. Saturday was a fine, quiet, cold day, and in the afternoon it became extremely foggy. Ground frost set in at night. In Dublin the mean height of the barometer was 29·705 inches, pressure varying from 29·264 inches at 9 p.m. of Monday (wind, S.W.) to 29·979 inches at 9 a.m. of Thursday (wind, S S.E.). The mean temperature was 46·2°. The mean dry bulb temperature at 8 a.m. and 9 p.m. was 44·9°. On Monday the thermometers in the screen rose to 56·4°; on Saturday they fell to 34·0°. The prevailing winds were S. and S.W. Rain fell on three days, to the amount of ·923 inch, ·718 inch being measured on Friday.

Very dull, damp, but mild weather prevailed for the most part during the week ended Saturday, the 26th; but this week is particularly noteworthy for an excessive rainfall over the south of Ireland. At Roche's Point, Co. Cork, 4·10 inches of rain were measured up to Saturday morning; and at Valentia Island the amount was 3·20 inches in the same period. The general distribution of atmospherical pressure which led to this unusual local precipitation consisted in the presence of a large anticyclone to the eastward and northeastward of Great Britain, while areas of low pressure advanced over the west and south of Ireland, but failed to make headway against the high-pressure area to the eastward. The winds in Ireland were constantly S. or S.E. in consequence of this arrangement of pressure. On Thursday, there was a temporary break up of the anticyclone owing to the advance of a low pressure system over Northern Europe from N.W., but on Friday a new anticyclone formed over the S. of Norway while a fresh depression edged in over Ireland from W. Very little rain fell during the week in Scotland, where sharp frost occurred on Wednesday, the thermometer falling to 21° at Nairn. On Saturday a fresh N.W. wind suddenly set in and cleared the sky. In Dublin, the weather was dry from Sunday night to Wednesday evening, but Thursday and Friday were gloomy, damp days. The mean height of the barometer was 30·129 inches, pressure ranging from 29·833 inches at 9 a.m. of Sunday (wind, S.S.E.) to 30·279 inches at 9 p.m. of Saturday (wind, W.N.W.). The mean temperature was 47·0°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 47·1°. On Monday, Friday, and Saturday, the screen thermometers rose to 51·6°, having fallen on Sunday to 33·7°. Rain fell on four days to the total amount of ·464 inch, ·292 inch being registered on Friday. The prevalent wind was south-easterly. The mean temperature was 5° above that of the week ending October 22nd (42°). On the Continent severe cold set in towards the close of this week.

The last four days of the month (27th–30th) were changeable. At first an anticyclone in the South caused a warm westerly current of air to pass over the British Islands, so that the thermometer rose at Nairn, in Invernessshire, to 59° on the 28th, and to 60° on the 29th. Extensive depressions were found in the far north on the 29th and 30th, the barometer falling to 28·45 inches at Haparanda, Gulf

of Bothnia, on Tuesday evening, the 29th. Fresh westerly gales were felt in many districts in consequence. The month closed with a fine, cold day.

The rainfall in Dublin during the eleven months ending November 30th has amounted to 24·849 inches on 186 days, compared with 15·378 inches on 141 days during the same period in 1887, 25·768 inches on 173 days in 1888, 25·718 inches on 178 days in 1889, 25·706 inches on 189 days in 1890, 24·521 inches on 163 days in 1891, and a twenty-five years' average of 25·292 inches on 177·4 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in November, 1892, was no less than 5·020 inches, distributed over 25 days. Of this quantity ·780 of an inch fell on the 18th, and ·640 of an inch on the 3rd.

From January 1st, 1892, up to November 30th, rain fell at Knockdolian, Greystones, on 165 days, and to the total amount of 32·243 inches.

DECEMBER.—A generally cold, dry, breezy month. Two periods of severely cold weather were separated from each other by a singularly mild and even warm spell extending from the 14th to the 22nd inclusive. The cold weather in the earlier part of the month came from the northwestward and was accompanied by a good deal of snow and hail. That at the close of the month spread westwards from the Continent to the British Isles, and was accompanied by strong southeasterly winds and unusually dry weather. The rainfall of the whole month (·795 of an inch) was scarcely one-third of the average. No serious gales were felt, and calms with fog prevailed during the frosty spells at the beginning and end of the month.

In Dublin the arithmetical mean temperature (39·6°) was decidedly below the average (41·3°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 38·9°. In the twenty-seven years ending with 1891, December was coldest in 1878 (M. T. = 32·8°), and in 1874 (M. T. = 36·8°), and warmest in 1865 (M. T. = 46·2°). In 1886 the M. T. was as low as 37·9°; in the year 1879 (the "cold year") it was also 37·9°. In 1887 the M. T. was 39·9°; in 1888 it was 43·6°; in 1889 it was 43·8°; in 1890 it was 39·2°; and in 1891, it was 43·0°.

The mean height of the barometer was 29·941 inches, or 0·066 inch above the corrected average value for December—namely, 29·875 inches. The mercury rose to 30·325 inches at 9 a.m. of the 8th, and fell to 29·344 inches at 2 p.m. of the 11th. The observed range of atmospherical pressure was, therefore, 0·981 inch—that is, a little less than one inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 38·9°, or as much as 7·2° below the value for November, and 5·0° below that for October, 1892. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·52), the value was 39·7°, or 1·8° below the average mean temperature for December, calculated in the same way, in the twenty-five years 1865-89, inclusive (41·5°). The arithmetical mean of the maximal and minimal readings was 39·6°, compared with a twenty-five years' average of 41·3°. On the 18th the thermometer in the screen rose to 55·5°—wind, S.W.; on the 27th and 28th the temperature fell to 21·9° in the screen—wind, calm. The minimum on the grass was 16·5° on the 28th. There were 14 days of frost in the screen and 20 days of frost on the grass.

The rainfall was only ·795 of an inch, distributed over only 10 days. The average rainfall for December in the twenty-five years, 1865-89, was 2·404 inches, and the average number of rainy days was 16·9. The rainfall, therefore, and the rainy days were decidedly below the average. In 1876 the rainfall in December was very large—7·566 inches on 22 days. In 1872, 4·932 inches fell on as many as 24 days; and in 1868 (which was otherwise a fine and dry year), 4·749 inches fell on as many as 27 days. On the other hand, in 1867, only ·771 of an inch was measured on 13 days; and in 1871 the December rainfall was only ·797 of an inch on 15 days. In 1885, only ·742 of an inch of rain was measured on but 10 days, but in 1886 the rainfall was 3·348 inches, distributed over as many as 21 days. In 1887 (the "dry year"), the rainfall was 1·223 inches on 19 days; in 1888, it was 2·911 inches on 17 days; in 1889, 1·554 inches fell on 15 days; in 1890, 1·856 inches on 11 days, and in 1891 3·299 inches on 21 days.

A lunar halo appeared on the 31st. High winds were noted on 15 days, but attained the force of a gale on only two occasions—the 11th and the 23rd. The atmosphere was more or less foggy in Dublin on the 2nd, 7th, 10th, 20th, 25th, 26th, 27th, and 28th. Snow or sleet fell on the 3rd, 4th, 5th, and 24th. Hail fell on the 2nd, 3rd, and 5th. There were "silver thaws" on the 6th and 29th.

In Scotland December opened with intense but local cold—the thermometer at 8 a.m. of the 1st marking 18° in the screen at Wick, where the minimum had been 13°. At the same time temperature was about 40° higher in the South of Ireland (53° at Valentia Island and 52° at Roche's Point, Co. Cork); even in London it rose to 50° on this day. Calm and fog with frost occurred in Dublin on the morning of Friday, the 2nd, but in the afternoon the weather changed and hail fell at night. On Saturday there were showers of hail, sleet, and snow; so that the period closed with winter fully established.

A spell of very cold winterly weather prevailed during the week ended Saturday, the 10th. Three large areas of low pressure, as well as several secondary or subsidiary depressions, travelled southeastwards across the British Islands and North Sea to the Continent during the week. In consequence N.W., N., and N.E. winds prevailed, and there were frequent falls of cold rain or showers of sleet or snow and hail. On Sunday morning, the 4th, the barometer was below 29 inches in the Shetlands, and cold N.W. winds were blowing in all parts of the United Kingdom, accompanied by falls of snow or sleet. In Dublin the ground was white with snow from this day until the following Thursday. By 8 a.m. of Monday the centre of the depression (which was slowly filling up) lay over the extreme S.W. of Norway. Sharp frost prevailed, except at some southwestern Atlantic stations, such as Valentia Island, Scilly, and Jersey, and along the Atlantic seaboard of France. On Tuesday a wave of relative warmth spread quickly southeastwards across the British Islands, causing a "silver thaw."

Next day temperature gave way. On Thursday morning an anticyclone, with the barometer above 30·40 inches was found off the S.W. of Ireland ; but during the succeeding night a depression passed southeastwards across Great Britain so quickly that its centre had travelled from the Hebrides to Kent between 6 p.m. of Thursday and 8 a.m. of Friday. Rain or sleet fell generally in connection with this disturbance, but the sky soon cleared and frost returned. On Saturday another depression arrived from N.W., causing dull, raw, damp weather and a moderate rainfall. In Dublin the mean height of the barometer was 29·967 inches, pressure ranging from 30·325 inches at 9 a.m. of Thursday (wind, W.), to 29·558 inches at 9 p.m. of Saturday (wind, W.S.W.). The corrected mean temperature was 35·1°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 34·0°. On Monday the thermometer fell to 27·5°, and on Saturday it rose to 47·6° in the screen. The rainfall was ·291 inch, on four days, ·180 inch being measured on Thursday. The prevailing winds were N.W. and W.

A marked advance in temperature after Tuesday, and the substitution of S.W. for N.W. winds, were the chief characteristics of the week ended Saturday, the 17th. The barometer was throughout low to the northward of the British Islands, relatively high and sometimes anticyclonic—as on Wednesday and Friday—over France. Hence the winds were westerly—at first, northwesterly ; afterwards, southwesterly. On Sunday a deep depression was found off the north of Scotland, where the barometer sank below 29 inches (28·92 inches in the Hebrides at 8 a.m.). In Dublin the wind freshened to a moderate gale during the forenoon. Bright cold weather held throughout Monday, but on Tuesday cirriform cloud overspread the sky from N.W., and rain fell heavily towards night. Next morning temperature exceeded 50° over the greater part of Ireland, and this increase of warmth subsequently became general, so that on Thursday the thermometer rose to between 50° and 55° all over Ireland and England. In Scotland, however, the maximum remained well within the "forties." The last two days of the week were open and breezy, with a drier atmosphere than of late. In Dublin the mean height of the barometer was 29·902 inches, pressure varying between 29·344 inches at 2 p.m. of Sunday (wind, W.N.W.) and 30·224 inches in the night of the 15th–16th (wind, W.S.W). The corrected mean temperature was 44·4°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 44·3°. On Tuesday the thermometer in the screen fell to 31·9°, on Wednesday it rose to 53·8°. The rainfall was ·209 inch on three days, ·169 inch being measured on Tuesday. The prevailing winds were westerly (N.W. to S.W.).

At first singularly mild and open, the weather gradually became cold and bleak during the week ended Saturday, the 24th. No frost was, however, felt near Dublin or indeed in Ireland at large—one reason being the remarkable prevalence of cloud, which in Dublin amounted to 92 per cent. on the average at 9 a.m. and 9 p.m. During the earlier part of the week the wind was southwesterly, Ireland being on the borderland between an anticyclone which lay over France and Germany, and two deep depressions which travelled in rapid succession northeastwards across the Norwegian Sea, Norway, and Lapland. At 8 a.m. of Sunday, atmospherical pressure ranged from 30·55 inches at Lyons (therm. 26°) to 28·69 at Bodö in Norway (therm. 39°). On this day the shade thermometer rose to 55·5° in Dublin and to 57° at Nairn, in the N.E. of Scotland. On Tuesday morning a tongue of high pressure stretched northwards from France across Great Britain to the Shetland Islands. The wind consequently backed in Ireland to S. and finally to S.E., and temperature began to fall. On Thursday a depression approached the S.W. of Ireland from the Atlantic, and remained in the same locality to the close of the week. It produced strong S.E. winds and gales in Ireland on Friday and cold rain and sleet on Saturday. Some sharp frosts occurred at some central stations in Great Britain during the last three days, but the weather remained warm in the S. and S.W. of Ireland, where even on Saturday the thermometer exceeded 50°. In Dublin the mean height of the barometer was 29·979 inches, pressure rising to 30·116 inches at 9 p.m. of Sunday (wind, W.S.W.), and falling to 29·821 inches at 9 p.m. of Saturday (wind, S.E. by S.). The corrected mean temperature was 46·9°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 45·8°. On Sunday the screened thermometers rose to 55·5° ; on Saturday they fell to 38·1°. Slight drizzle fell to the amount of ·003 inch on Sunday and Monday, and on Saturday ·040 inch of cold rain and sleet was measured—total precipitation, = ·043 inch. At the Ordnance Survey Office, Phœnix Park, the rainfall on Saturday, the 24th, was no less than ·640 inch. Dust was troublesome on Friday. The prevalent winds were S.W. and S.E.

The week ended Saturday, the 31st, was remarkable for the intensity and persistence of the frost in central Europe and in England—in most parts of Scotland and Ireland the frost was at times severe but not persistent—in the N.W. of Scotland and the W. and S.W. of Ireland there was scarcely any frost at all. The cause of this distribution of temperature was mainly the presence of an anticyclone over central Europe and England, while areas of relatively low atmospherical pressure were for the most part found off the N. of Scotland in one direction and off the S.W. of Ireland in another. The isotherm of 20° embraced one or another portion of Great Britain at 8 a.m. on every day of the week except Saturday—a fact which bears striking testimony to the severity of the cold. At 8 a.m. of Tuesday the thermometer stood as low as 10° at Loughborough, in Leicestershire. No extreme cold was felt in Ireland, but it was as severe in and around Dublin as in any part of the island—from Monday afternoon until midnight on Wednesday also an irritating dry smoke fog hung almost constantly over the city. A "silver thaw" occurred on Thursday with a freshening S. wind, which afterwards backed towards S.E. and E. with a renewed fall of temperature and leaden skies. The precipitation over Western Europe throughout the period was singularly small. In Dublin the mean height of the barometer was 29·966 inches, pressure ranging from 30·294 inches at 9 p.m. of Tuesday (wind, calm) to 29·698 inches at 9 p.m. of Friday (wind, S.E.). The corrected mean temperature was 32·8°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 31·7°. On Friday the screened thermometers rose to 43·1°, on Tuesday and again on Wednesday they fell to 21·9°. On Wednesday the minimum on the grass was 16·5°. From the evening of Christmas Day

until Thursday morning the thermometer never rose above freezing point in the city, even in the screen. There was no rainfall. The prevailing direction of the wind was S.E. Calms accompanied the period of frost. A lunar halo was seen at 10 p.m. of Saturday, the 31st.

The rainfall in Dublin during the year ending December 31st amounted to 25·644 inches on 196 days, compared with 27·820 inches on 184 days in 1891, 27·562 inches on 200 days in 1890, 27·272 inches on 193 days in 1889, 28·679 inches on 190 days in 1888, 16·601 inches on 160 days in 1887, and a 25 years' average of 27·696 inches on 194·3 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in December, 1892, was only ·756 of an inch distributed however, over 16 days. Of this quantity ·264 of an inch fell on the 14th.

From January 1st to December 31st, 1892, rain fell at Knockdolian, Greystones, on 181 days, and to the total amount of 32·999 inches.

July, . . .	1·952	·610	15th	12	Total, . .	25·644	–	–	196

The rainfall was 2·052 inches in defect of the average annual measurement of the twenty-five years, 1865–89, inclusive—viz., 27·696 inches.

It will be remembered that the rainfall in 1887 was very exceptionally small—16·601 inches, the only approach to this measurement in Dublin being in 1870, when only 20·859 inches fell, and in 1884, when the measurement was 20·467 inches. In seven of the twenty-five years in question the rainfall was less than 26 inches, and in 1885 it was 26·614 inches.

The scanty rainfall in 1887 was in marked contrast to the abundant downpour in 1886, when 32·966 inches—or as nearly as possible double the fall of 1887—fell on 220 days. Only twice since these records commenced has the rainfall in Dublin exceeded that of 1886—namely, in 1872, when 35·566 inches fell on 238 days, and in 1880, when 34·512 inches were measured on, however, only 188 days.

In 1892, there were 196 rainy days, or days upon which not less than ·01 inch of rain (one hundredth of an inch) was measured. This was slightly in excess of the average number of rainy days, which was 194·3 in the twenty-five years, 1865–89, inclusive. In 1868—the warm dry year of recent times—as well as in 1887, the rainy days were only 160, and in 1870 they were only 145. In 1868, however, the rainfall amounted to 24·935 inches, or more than 8 inches above the measurement in 1887, and even in 1870, 20·859 inches were recorded.

The rainfall in 24 hours from 9 a.m. to 9 a.m. exceeded one inch on two occasions, viz.—May 28th (2·056 inches), and August 16th (1·310 inches).

Included in the 196 rainy days in 1892 are 31 on which snow or sleet fell, and 39 on which there was hail. In January hail was observed on 2 days, in February on 5 days, in March on 10 days, in April on 8 days, in May on 1 day, and in June on 2 days. Hail also fell once in September, on 7 days in October, and on 3 days in December. Snow or sleet fell on 7 days in January, on 8 days in February, on 7 days in March, on 5 days in April, and on 4 days in December. Thunder occurred on seven occasions during the year—twice in June and August, and once in January, July, and October. Lightning was also seen twice in August, and once in September and October.

The rainfall was distributed as follows:—4·808 inches fell on 48 days in the first quarter, 6·962 inches on 49 days in the second, 8·140 inches on 53 days in the third, and 5·734 inches on 46 days in the fourth and last quarter.

The rainfall in the first six months was 11·770 inches, on 97 days—that is, not one-half of the year's record. In May the rainfall was 4·177 inches on 19 days, and in August as much as 3·557 inches fell on 22 days.

Of the 5·734 inches which fell in the fourth quarter of the year, 2·355 inches were measured in October on 17 days, and 2·404 inches in November on 19 days. In December the rainfall was only 795 inch on 10 days.

Rainfall at Killiney, Co. Dublin, in 1892.

The following is a note of the rainfall recorded at the residence of Mr. Robert O'Brien Furlong, Cloneevin, Killiney, Co. Dublin, during 1892:—Total rainfall, 28·12 inches on 180 days. Average of eight years, 25·52 inches on 174·37 days. The fall was above the monthly average in February, May, June, July, August, September, and below the average in January, March, April, October, November, and December. The lowest monthly fall was in December, = ·62 inches (average, 2·117 inches), and the highest in May, = 4·68 inches (average, = 2·496 inches.) The greatest fall in 24 hours was 1·80 inches on May 28th. The greatest number of days on which rain fell (·01 or upwards) in any month was 21 in November; the lowest was 10 in March. The lowest monthly average (eight years) is June, = 1·426 inches; the highest is October, = 3·201 inches.

MARRIAGES, BIRTHS, and DEATHS *registered* in the Year 1892.

I.—PROVINCE OF LEINSTER.—MARRIAGES, BIRTHS, AND DEATHS, 1892.

SUPERINTENDENT REGISTRARS' DISTRICTS, ARRANGED BY COUNTIES.*

Wherever the minus sign (—) is prefixed to the number given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, *less than the Deaths* to the extent stated.

No.	SUPERINTENDENT REGISTRARS' DISTRICTS.	Area in Statute Acres.	Population, 1891.	TOTAL			BIRTHS.				DEATHS.		Excess of Births over Deaths.
							Including Illegitimate Births.		Illegitimate Births.

NOTE.—The Registrars' Districts are subdivisions of the Unions or Superintendent Registrars' Districts, and are identical with the Dispensary Districts of the same names, except in a few instances.

The letter *W.* denotes that the Registrar's District contains within its limits the Workhouse belonging to the Union or Superintendent Registrar's District.

Wherever the minus sign (—) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, *less than the deaths* to the extent stated.

NOTE.—The mean pressures shown in the above Table have been given corrected for instrumental error and reduced to 32° Fahrenheit, but not reduced to mean sea level. If it be desired for any purpose to reduce them to the normal, the approximate correction for the purpose (varying within slight limits with the pressure and the temperature) is:—+ ·058.

NOTE.—This table has been constructed for the years 1801 to 1831—By adopting the rates of increase of the male and female population between 1821 and 1831, as shown by the Irish Census Reports of 1831—the first complete Census of Ireland having been taken in 1821.

1832 to 1841—By adopting the rate of increase between the population of 1831 and 1841, according to the Irish Census Report of 1841.

1842 to 1846—By taking the English average birth-rate of 1 in 31, and death-rate of 1 in 45, and deducting the annual emigration from Ireland according to the returns received from the Emigration Commissioners in England.

1847 to 1851—The English birth-rate, as above, was used, deducting the number of deaths and the number of emigrants in each year, as given in the Irish Census Reports of 1851; an allowance, proportioned to the number of recorded deaths and the number of emigrants being made in each year for the excess of the number thus arrived at for 1851 over the actual population according to the Census of that year.

1852 to 1871—The English birth and death rates, as above, were used, deducting the number of emigrants according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over Census numbers for 1861 and 1871 as explained for the last period.

1872–92—By adding the Births registered in each year to the estimated population for the previous year, deducting the deaths and the number of emigrants, and adjusting the results for the years 1872–81 and 1882–92 to allow for the discrepancy between the number thus arrived at for 1881 and 1891 respectively, and the population as shown by the Census in each of these years.

AGES of the POPULATION in IRELAND according to the Census Returns of 1861, 1871, 1881, and 1891.

Periods.	Sexes.	Ages—Years.														Total.
		Under 1.	1 and under 5.	5 and under 10.	10 and under 15.	15 and under 20.	20 and under 25.	25 and under 35.	35 and under 45.	45 and under 55.	55 and under 65.	65 and under 75.	75 and under 85.	85 and under 95.	95 and upwards.

REPORT on the ADMINISTRATION of the LEGAL WORK of the GENERAL REGISTER OFFICE, DUBLIN, for the Financial Year 1892–93.

SIR,—I beg to report that the legal work of your Department during the year 1892–93 was administered as follows:—

During the year, in addition to a large number of cases, in which it was found that no proceedings could be taken against the responsible parties, as the legal time for doing so had elapsed, 418 offences against the Registration Acts were reported by Local Officers, and came under investigation in this department. In many of these the defaulters came forward and complied with the requirements of the law, on becoming aware that proceedings against them were in contemplation.

After careful inquiry into the circumstances and examination of the evidence available, in 127 cases prosecutions were directed against the offenders. In 69 of these the parties were convicted and punished; in 52 cases the proceedings were abandoned, the parties (in most cases) paying the costs of court and complying with the law, and in 6 cases the summonses were dismissed.

The cases dealt with included the following offences:—Neglect to register births; neglect to register deaths; neglect to furnish certificates of marriage; failure of coroner to furnish certificate of inquest; giving false information as to age at death, as to the cause of death, and as to duration of illness previous to death; giving false information as to births, viz., registering illegitimate children as legitimate, and misrepresenting date of birth; carelessly allowing injury to Register Books.

The following are the details in a few of these cases:—

P. N. was prosecuted at Killala Petty Sessions for neglecting to register the birth of his child. He was convicted and fined £1.

P. C. was prosecuted at Kilmacow Petty Sessions for a similar offence to the foregoing, and was convicted and fined £1 and costs.

M. F. was prosecuted at Cappawhite Petty Sessions for neglecting to register the death of his child. He was convicted and fined, with £1 costs.

M. J. M. was prosecuted at Dromara Petty Sessions for registering an illegitimate as legitimate. She was convicted and fined, with costs.

J. C., a Registrar of Marriages, was prosecuted for carelessly allowing certain Register Books to be injured while in his custody. He was convicted and fined £5.

M. C. was prosecuted at Newbridge Petty Sessions for falsely stating, when registering a death, that she was present thereat, and for falsely stating the age of deceased, with the view of fraudulently obtaining money from an Insurance Society. She was convicted and fined £2 and costs, or one month's imprisonment.

H. W. was prosecuted at Moira Petty Sessions for giving false information to the Registrar when registering the death of his wife, by wilfully understating her age, for the purpose of defrauding an Insurance Company. He was convicted and fined £1 and costs.

K. H. was prosecuted at Cork Petty Sessions for giving false information to the Registrar when registering the death of her mother-in-law, by wilfully understating her age, the object in this case also being to defraud an Insurance Company. She was convicted and fined £2 and costs.

Notwithstanding the vigorous measures adopted by the department for the punishment of offenders, several Registrars report that they believe false information is frequently given to them, especially in cases of deaths.

The *modus operandi* in one class of offences appears to be as follows: when a member of a family is entered in a Friendly Society or Industrial Assurance Company, the age is frequently given as much below the real age in order to reduce the amount of the premium payable. After a time the person dies, and then the registry is effected so as to suit the statements previously made to the Society or Company.

It sometimes happens, however, that the informant overlooks the fact that the age in the register is to correspond with the age in the policy, and, in order to obtain the money, another nefarious proceeding is then necessary, viz., the making a declaration before a magistrate, altering the age correctly given in the register to an incorrect age, to agree with the age in the policy.

The greatest pains have been taken to obtain evidence in these cases to convict the offenders, but in many of them, I regret to state, for want of documentary proof of age, the case had to be abandoned, though no reasonable doubt existed that the offence had been committed.

The absence of reliable records of birth or baptism in the case of old persons, makes it exceedingly difficult to deal with them. In several cases the age of a deceased person has been successfully proved from a marriage register, giving the age at time of marriage, and in other cases the age inserted or proposed to be inserted in the register has been proved to be impossible from the records of the births or baptisms of the children of the deceased.

The Department is greatly indebted to the Inspector-General of Royal Irish Constabulary and the Commissioner of Metropolitan Police for their kind assistance in investigating these numerous and varied criminal cases.

In addition to the above mentioned, there were a number of cases during the year in which proceedings were taken under the 26 & 27 Vic., cap. 90, before the magistrates at Petty Sessions for corrections in marriage registers, the summonses in these cases being issued at the instance of local Registration Officers.

A sum of £130 was provided in the estimate to meet legal charges. The total cost of the legal service of the Department during the year was £79 4*s.* 9*d.*, of which sum £54 was paid for local professional assistance and £20 2*s.* for mileage to the Registrars.

I am, Sir,

Your obedient servant,

R. E. Matheson,

Barrister-at-Law.

Thomas W. Grimshaw, Esq., M.D.,
Registrar-General.

DUBLIN CASTLE,

23rd December, 1893.

SIR,

I have to acknowledge the receipt of your letter of the 22nd instant, forwarding, for submission to His Excellency the Lord Lieutenant, the Twenty-ninth Detailed Annual Report on Marriages, Births, and Deaths registered in Ireland in the year 1892.

I am,

Sir,

Your obedient Servant,

D. HARREL.

The Registrar General,

Charlemont House,

Rutland Square
